

Process infrared thermometer with 4-20 mA output and USB communication

Rayomatic USB non-contact infrared sensors measure temperatures from -40°C to 1000°C and provide a linear 4 to 20 mA output. The signal is compatible with almost any indicator, controller, recorder, data logger etc., without the need for special interfacing or signal conditioning.

They are suitable for most materials such as food, paper textiles, plastics, leather, tobacco, pharmaceutical, chemicals, rubber coal and asphalt.

Fully configurable by PC, Rayomatic USB is supplied with IRConfig software and USB cable. The emissivity and range can be set with the software or adjusted by OPC client.

The sensor can be either connected with the 4-20 mA cable, the USB cable or both.
