## **ADDITEL CORPORATION**

Additel Corporation is one of the leading worldwide providers of process calibration tools. We are dedicated to designing, manufacturing, and delivering the highest quality handheld test tools and portable calibrators for process and calibration industries. For many years Additel has successfully developed automated pressure calibrators, digital pressure test gauges, digital pressure calibrators, pressure test and calibration pumps, and multifunction process calibrators. In recent years, we have expanded our product offering with temperature calibration tools that are helping to make metrology simple. Coupled with our accredited calibration laboratory in Brea, CA, our products, calibration services and customer support are second to none. Additel products are currently used in over 100 countries worldwide, with a worldwide sales and support channel in place to assist you.

Product quality and customer service along with innovative engineering have been our top priorities and will continue to be our guiding principles going forward. We are committed to customer satisfaction through quality products, competitive pricing, unmatched services/technical support and continued introduction of new and innovative products.

Phone: 714-998-6899 Fax: 714-998-6999 Email: sales@additel.com

## A Message From Additel's President

Dear Additel Customer,

I grew up in a small town outside of Denver, Colorado where my grandfather started an insurance agency located on our main street. Later, my father took over the business and it continued to flourish until he sold the business just a few years ago. I marvel that our family business, not only survived, but grew over the last 50 years. Despite the industry switching from traditional agencies to direct internet sales, the family business continued to do well. As I look back at this, I believe I know why my father and grandfather did so well.

When Grandpa started Sanders Insurance Agency, he confirmed his business deals with a handshake. There were no lengthy written contracts, price lists, or complex agreements. Just his word and a handshake were all that was needed be-

cause he was known as a man of integrity who put his customer

Jon Sanders - Additel President

first. My father continued to grow the business on the same foundational principles.

I joined Additel in 2013 and saw an organization founded on values of integrity and customer service. And when I saw the amazing high-quality, innovative products and I knew this was the start of something special.

Over the years, we've outgrown buildings and continue to add more people. But we don't just hire anyone. To have the best products and services, you need to have the best people behind them! Quality and customer service go far beyond a well-designed product-it reaches into the very fabric of the company culture. We look for people that enjoy serving you and will not compromise quality.

Guy Sanders

Year over year, we continue to introduce new products which are industry firsts. Look on page

Denver, CO USA

2 and you will see we've done it again with our new ADT761A—the only portable, automated calibrator up to 1000 psi (70 bar) on the market. We invest a tremendous amount of time and effort into research and development to regularly introduce breakthrough products that address some of the test and measurement challenges you see on a day-to-day basis.

As we've grown, so has our gratitude and appreciation for you. I know customers just like you are the key to our success. We are not perfect and occasionally we will make mistakes, but I can promise you if we do mess up, we will do all in our power to make it right. And that is something we can shake on! Thank you for your business!

## Additel 761A Series Automated Pressure Calibrators

- Automated and self-contained pressure generation and control to 1,000 psi (70 bar)
- Standard accuracy to 0.02%FS
- Optional precision accuracy models to 0.01%FS
- Two removable internal pressure modules for multi-range selection
- Control stability to 0.003%FS
- Portable, designed for use in the field and in the lab
- Ability to measure two external pressure modules
- Wi-Fi, Bluetooth, USB and Ethernet communication
- Full HART field communicator
- HART and profibus communication
- Data logging and task management
- Patented electric pump technology and improved speed

#### **OVERVIEW**

------

At Additel, innovation and continuous improvement are part of our company's culture and the products we introduce. When we set out to deliver the Additel 761A series calibrators, we knew we needed to provide breakthrough improvements and additional value to the existing line of calibrators (Additel 761 series). The ADT761A has many improvements: increased pressure range to 1,000 psi (70 bar), removable internal pressure modules, optional precision models to 0.01%FS, increased speed to pressure, ability to read two external pressure modules, touch screen display, Wi-Fi, Bluetooth, and Ethernet communications and a fully functional HART communicator to help with all your transmitter needs.

Just like the first generation, this second generation product is completely selfcontained and automated with a built-in pump for pressure generation and precision control technology. Simply set the desired pressure and watch the calibrator do the work. •

#### ADT761A-LLP

The Additel 761A-LLP is designed for low pressure calibration and comes with a ±30 inH2O (±75 mbar) high range module and a low range module of your choice ranging from ±20 inH2O to as low as ±0.25 inH2O (±50 to ±0.62 mbar). This unit has an accuracy of 0.05%FS with control stability better than 0.005%FS. All measurements can be made in differential or gauge pressures.

#### ADT761A-D

The Additel 761A-D also provides differential and gauge measurement which covers the range of -13.5 to 35 psi (-0.95 to 2.5 bar). This unit comes with a CP35 module (-13.5 to 35 psi) and one low range module of your choice ranging as low as  $\pm 10$  inH2O (25 mbar). Each ADT761A-D can be preconfigured with the modules that fit your need to give you the best precision at the pressures you perform calibrations.

#### ADT761A-500

The Additel 761A-500 will generate and control from vacuum pressures up to 500 psig (35 bar.g). Both gauge and absolute pressures can be realized due to a built-in barometer. Each unit comes with a CP500 module (-13 to 500 psig) for the high range and the low range can be preconfigured based on the variety of modules available down to 10 psig (0.7 bar.g).

#### ADT761A-1K

The Additel 761A-1K will generate and control from vacuum pressures up to 1,000 psig (70 bar.g). This unit can typically achieve 1,000 psi in less than 45 seconds. Like the ADT761A-500, both gauge and absolute pressures can be realized due to a built-in barometer. Each unit comes with a CP1K module (-13 to 1,000 psig) for the high range and the low range can be preconfigured based on the variety of modules available down to 30 psig (2 bar.g).

#### **ADT761A-APXR Precision Accuracy Options**

The Additel 761A series includes a precision accuracy option which provides an accuracy of 0.01%FS. This calibrator option includes a single non-removable sensor and can measure absolute and gauge pressures. Model configurations are available from 15 to 1,000 psig (1 to 70 bar.g).

#### ADT761A-BP

The Additel 761A-BP is designed for calibration of barometer sensors. With a range of 100 to 1200 hPa and an accuracy of 0.01%FS, this unit is ideal for calibration on the bench or in the field.

#### **Pressure Specifications**

Model Specification	761A-LLP	761A-D	761A-500	761A-1K	761A-APXR	761A-BP
Max Pressure Range	30 inH2O (75 mbar)	35 psi (2.5 bar)	500 psig (35 bar.g)	1,000 psig (70 bar.g)	Dependent on APXR sensor	1,200 hPa
Min Pressure Range	-30 inH2O (-75 mbar)	-13.5 psi (-0.95 bar)	-13 psi (-0.9 bar)	-13 psi (-0.9 bar)	Dependent on APXR sensor	100 hPa
Accuracy <sup>(1)</sup>	0.05%FS	0.02%FS	0.02%FS <sup>(2)</sup>	0.02%FS <sup>(2)</sup>	0.01%FS	0.01%FS
Stability	0.003%FS or 0.03 Pa	0.003%FS	0.003%FS	0.003%FS	0.003%FS	0.02 hPa
Pressure Type	Differential, Gauge	Differential, Gauge	Gauge, Absolute	Gauge, Absolute	Gauge, Absolute	Absolute
Over Range Indication			120	%		
Resolution	6 digits					
Measurement Units	Pa, hPa, kPa, mPa, bar, mbar, psi, mmHg@0°C, cmHg@0°C, mHg@0°C, inHg@0°C, inH2O@4°C, mmH2O@4°C, cmH2O@4°C, mH2O@4°C, mmH2O@20°C, cmH2O@20°C, mH2O@20°C, inH2O@20°C, inH2O@68°F, kgf/cm2, mtorr, torr, lb/ft2, tsi, custom					
Barometric Accuracy	N/A	N/A	60 Pa	60 Pa	60 Pa	N/A

[1] One year accuracy (including 1 year stability). FS specification applies to the span of the module range.

[2] Specification based on gauge measurement. An additional 60 pa uncertainty will need to be included when measuring in absolute mode. Applicable only for use with the ADT761A-500 and ADT761A-1K

\* Additel 761A calibrators support 160A series intelligent digital pressure modules that are available for gauge, vacuum and absolute pressure from -15 psi to 60,000 psi (-1 bar to 4200 bar). For detailed specifications refer to the 160A series pressure modules data sheet.

[1] FS specification applies to the span of the module range. Accuracy includes one-year stability, except for DP025 to DP10 modules.

[2] Accuracy is a 6 months spec, 1-year long-term drift is 0.2%FS.

[2] Accuracy is a 6 months spec, 1-year long-term drift is 0.2%FS.
[3] Accuracy is a 6 months spec, 1-year long-term drift is 0.1%FS.
[4] Accuracy is a 6 months spec, 1-year long-term drift is 0.05%FS.
[5] Specification based on gauge measurement. An additional 60 Pa uncertainty will need to be included when measuring in absolute mode.
[6] The low module pressure range may be outside the pressure range of the calibrator Applicable only for use with the ADT761A-500 and ADT761A-1K
\* ADT155 Pressure modules are calibrated in psi & inH2O

Metrology Made Simple

#### **General Specifications**

Specification	Description
User Interface	Color touch screen and/or keypad operation
Channels	Four total: one electrical, high or low internal pressure module, two external pressure modules
Enclosure IP Rating	IP31
Battery	Rechargeable Li-Ion battery, typically 12 hours of operation, recharges in less than 5 hours.
Power	Rechargeable Li-lon battery, external power 110/220 V power adapter 27 V
Display	7" TFT touch screen 800 x 480 color
Communications	USB, LAN, Bluetooth, Wi-Fi
Weight	<17.52 lb (7.95 KG)
Size	11.77 x 7.60 x 7.56 in (299 x 193 x 192 mm)
Certification	ISO 17025 accredited certificate of calibration with NIST-traceable data
Data Storage	6 GB
Data Logging	Up to 1,000,000 readings (data and time stamped)
HART Communicator	Read, configure and calibrate HART devices - DD files updated periodically
Task documentation	Up to 1000 tasks can be stored with data
Automation Functions	Switch test, auto step, leak test
User Interface Localization	English, German, French, Italian, Spanish, Portuguese, Chinese, Japanese, and Russian
Pump life	>1,000,000 cycles
	Operating temperature: 32°F to 122°F( 0°C to 50°C)
Environmental	Compensated temperature: 32°F to 122°F( 0°C to 50°C)
Specifications	Storage temperature: -20°C to 60°C ( -4°F to 120°F)
	Humidity: <90%, non-condensing
Vibration and Shock	Vibration: 4 g (20 to 2,000 Hz) Shock: 8 g, 1 meter drop test
Compliance	CE
Software Compatibility	ACal, Additel Land and Additel Link for access via mobile application
Warranty	1 year

### Introducing the New Additel 286 Multifunction Reference Thermometer Readout

- Measure and calibrate SPRTs, RTDs, thermistors and thermocouples
- 1PPM resistance ratio accuracy (channel 1)
- 8 1/2-digit DC multimeter
- Measure up to 82 channels
- Sample rates up to 10 channels per second
- Bluetooth, WIFI ,USB & Ethernet (RJ-45) capable
- Build-in automatic temperature control, data collection, and coefficient generation
- Support for creating custom control of heat sources with RS-232
- Auto zero power feature (self heating compensation)
- 10.1" touch screen display
- Supports fully automated temperature calibrations with data collection and report generation(no software required)

## Additel 761 Automated Pressure Calibrators

- Fully automated pressure calibrator with built-in pressure generator / controller to as high as 600 psi (40 bar) or as low as 0.01 Pa (0.00004 inH<sub>2</sub>O)
- 0.02%FS accuracy
- Dual pressure modules
- Built-in filter and liquid trap with venting system prevents contamination of the calibrator
- Portable (12.4 lb)

#### **OVERVIEW**

With a built-in high performance electronic pump and precision pressure controller, the 761 series portable automated pressure calibrators provide a turnkey solution for calibration of gauges, transmitters, and switches both in the field and in the laboratory. In a portable package, this calibrator can automatically generate pressures from 90% vacuum to 600 psi (40 bar) with 0.005% FS pressure control stability and 0.02% FS accuracy. To improve the calibrator accuracy, two pressure modules with differing ranges are built-in and integrated with the internal pump and controller.

The 761-LLP is specially designed for low pressure calibration, and pressures can be set to as low as 0.01 Pa (0.00004 inH<sub>2</sub>O) with a control stability better than 0.05 Pa (0.0002 inH<sub>2</sub>O).

With optional external pressure modules (160A series), the 761 can measure pressures up to 10,000 psi (700 bar) with 0.02%FS accuracy. In addition to the pressure generation, control, and measurement capabilities, the 761 also features HART communication capability, supplies 24V loop power, and reads the current or voltage produced by the pressure transducers. The 761 is a state of the art automated pressure calibrator which brings automated pressure calibration to the field.

#### **FEATURES**

Pressure Range	Pressure generated by built-in pump and controlled automatically from 90% vacuum to 600 psi (40 bar) Pressure measured with external pressure modules (160A series) to 10,000 psi (700 bar)			
Accuracy	0.02%FS			
	0.05%FS (ADT761-LLP)			
Control Stability	<0.005%FS			
·····,	ADT761-LLP: < 0.05 Pa (0.0002 inH <sub>2</sub> O)			
	Built-in filter and liquid trap with venting system prevent contamination of the calibrator.			
Contamination Prevention System	Solid particles can be blocked by built-in filter A small amount of liquid can be collected by the built-in liquid trap.			
	Both solid particles and liquid can be blown out through the venting system.			
Automation and	Fully Automated pressure calibration			
Test Program	Task preset and auto run			
	Auto step			
Easy to Use	User friendly interface			
,	Intuitive icon driven menu structure			
	Measure mA with 0.01% RD + 1.5 µA accuracy			
Source and Measuring	Measure V with 0.01% RD + 1.5 mV accuracy			
Electrical	Source/sink 0 to 22 mA current			
Signals	24 VDC loop power supplied to pressure transmitter during test			
	Automated switch test			
Misuse Protection	Up to 30 V misuse protection on any two sockets			
Display	7" LCD color screen (800 X 480)			
	Task management capability			
Documenting	Internal memory stores 200 tasks			
and On-demand Logging	Download tasks and upload results			
	900 snapshots			
HART Communication Capability	Support HART instrumentation			
Pressure Output Rate	2.4 liters/minute			
Rechargeable Battery	Rechargeable battery with up to 8 hours operation between charges			

Leak Testing	Apply leak test to an external pressure system to determine the magnitude of pressure variations due to leaks
Pipeline Protection	Special design the pipeline layout to avoid possible blockage and leakage
Portable	Only 12.4 lb
Multi Lingual	English, German, French, Italian, Spanish, Portuguese, Simplified Chinese
Interface	(Traditional Chinese, Japanese and Russian are available per request)
ISO17025	ISO 17025 accredited calibration with data (included)

[1] One year accuracy (including 1 year stability). FS specification applies to the span of the module range.

[2] 0.05% FS accuracy (including 6 months stability). One year accuracy is 0.05% FS calibration accuracy combined with 0.05% FS one year stability.

\* Additel 761 calibrators support 160A series intelligent digital pressure modules that are available for gauge, vacuum and absolute pressure from -15 psi to 10,000 psi (-1 bar to 700 bar). Accuracy from 0.02%FS includes operation over 14°F to 122°F (-10°C to 50°C), one year stability and calibration uncertainty. For detailed specification refer to 160A series pressure modules datasheet.

#### Electrical Measurement and Source Accuracy

	Range	Resolution	Accuracy	
Voltage Measurement	±30.0000V	0.1 mV	±(0.01%RD + 1.5 mV)	
Current Measurement ±30.0000mA		0.1 µA	±(0.01%RD + 1.5 μA)	
Current Source 0.000 to 22.000mA		1 µA	±(0.02%RD + 2.2 μA)	
Switch Test	If the switch has detective Voltage, the range is from 3 V to 24 V $$			
DC 24V output	24 V ± 0.5 V, max: 50 mA

## Additel 760 Automatic Handheld Pressure Calibrators

- Fully automatic calibrator with built-in pump and controller
- Switchable internal pressure modules for expandable ranges
- Accuracy (1 year) of 0.02%FS
- External pressure modules available (measure only)
- Less than 4 lbs (1.8 kg) for handheld operation
- Source pressure, measure pressure and electrical
- 4 channels
- Optional HART communications
- Optional data logging and task documenting
- USB and Wi-Fi communications

#### **OVERVIEW**

A portable automated pressure calibrator in the palm of your hand—this could be our most exciting product yet! The Additel 760 series Automatic Handheld Pressure Calibrator takes portable pressure calibration to new levels. Weighing less than 4 lbs (1.8 kg), the ADT760's innovative design contains a built-in pump, precision pressure sensor, internal controller and a large touch-screen color display. To generate pressure, simply key in the desired pressure and the Additel 760 will do the rest. Each unit has four channels: one internal pressure channel for source and measure pressures, two external pressure measurement channels, and one electronic measure and source channel. This series of calibrator has three standard models with the option of adding HART communications, documentation and data logging.

#### ADT760-LLP

The 760-LLP is designed for low pressure calibration and comes with a build-in pressure module of your choice. The maximum range module compatible with the ADT760-LLP is to ±30 inH2O (±75 mbar) and provides an accuracy to 0.05%FS (see ordering information for configurations with the option of the ADT760 and a module of your choice). Additional internal pressure modules (ADT155 series) are available and provide a variety of ranges down to ±0.25 inH<sub>2</sub>O (±0.62 mbar). The accuracy of 0.05%FS and control stability 0.005%FS is based on the internal module's span. Measurements can be made in gauge or differential mode.

#### ADT760-D

The 760-D gives you differential and gauge pressure but at a higher pressure range than the ADT760-LLP. Covering the range of -12.5 to 35 psi (-0.86 to 2.5 bar) and with an accuracy of 0.02%FS, the ADT760-D is an ideal solution to cover very common gauge and differential pressure measurements. The Additel 760-D comes with an internal module of your choice. The maximum range module compatible with the ADT760-D is to 35 psi. Lower pressure configurations down to ±10 inH<sub>2</sub>O differential can be purchased to improve accuracy at lower pressures.

#### ADT760-MA

The 760-MA generates and controls pressure from vacuum pressures up to 300 psig (20 bar.g) with an accuracy of 0.02%FS. Equipped with a built-in barometric reference, each unit can switch between gauge and absolute pressure types. A variety of internal sensors are available which offer lower pressure ranges for improved performance.

#### **Documenting Process Functionality**

Each model of the Additel 760 series has an option incorporating documentation and communication functions turning your 760 into a multifunction documenting process calibrator. This feature provides HART communication, task documentation and data logging.

[1] FS specification applies to the span of the module range. Accuracy includes one-year stability, except for DP025 to DP10 modules. [2] Accuracy is a 6 months spec, 1-year long-term drift is 0.2%FS.

[3] Accuracy is a 6 months spec, 1-year long-term drift is 0.1%FS.

[4] Accuracy is a 6 months spec, 1-year long-term drift is 0.05%FS.

[5] Specification based on gauge measurement. An additional 60 pa uncertainty will need to be included when measuring in absolute mode. Applicable only for use with the ADT760-MA

[6] The low module pressure range may be outside the pressure range of the calibrator

\* ADT155 Pressure Modules are calibrated in psi & inH2O

#### **General Specifications**

Specification	Description
Channels	Four total: one electrical, one internal pressure, two external pressure (measure only)
Enclosure IP Rating	IP52 water and dust proof
Battery	Rechargeable Li-lon battery, typically 10 hours of operation, recharges in less than 4 hours
Display	Color 800 x 480 TFT 5-inch touch screen
Communications	USB and WiFi
Weight	<4 lbs (<1.8 kg)
Size	9.3 x 4.3 x 2.8 in (235 x 110 x 70 mm)
Certification	ISO 17025 accredited certificate with data included
HART Communications	Optional (ADT760-X-DL model)
Data Logging	Optional (ADT760-X-DL model), up to 1,000,000 readings (date and time stamped)
Task Documentation	Optional (ADT760-X-DL model) up to 1000 tasks
Automation Functions	Switch test, auto step, leak test
Misuse Protection	Up to 30 V on any two sockets
Multi Lingual Interface	English, German, French, Italian, Spanish, Portuguese, Chinese, Japanese, and Russian
Pump Life	>500,000 cycles
Power	Rechargeable Li-lon battery, external power: 110/220 V power adapter 10 V
Environment Specifications	Operation: 32°F to 122°F (0°C to 50°C), 0-90% RH, less than 3,000 meters Compensated temperature: 32°F to 122°F (0°C to 50°C) Storage temperature: -4°F to 158°F (-20°C to 70°C)
Vibration and Shock	Vibration: 4 g (20 to 2,000 Hz) Shock: 8 g, 1 meter drop test
Compliance	CE
Software	ACal, PCal, Land, LogII
Warranty	1 year
	I

## Additel 780 Series Pressure Controller

New Precision Accuracy Models with 1-Year Uncertainty to 0.01% of Reading

- Pressure ranges from vacuum to 3,000 psi (200 bar)
- Removable interchangeable intelligent sensors
- Precision accuracy models to 0.01% of reading
- Standalone solution to 1,000 psi (70 bar), no gas bottle required when used with the Electric Pump
- Standard model accuracy of 0.02% of full scale
- External pressure modules to 3,000 psi (200 bar)
- WiFi enabled communications
- Fully temperature compensated accuracy over 0°C to 50°C
- HART Communication and Profibus PA
- Large 7" color touch screen display
- Control stability of 0.003%FS
- Built-in barometer
- Easy-to-use icon based user interface

#### **OVERVIEW**

For years, we've provided the most durable, accurate, quality pressure calibration products for field applications. The Additel 780 series controller incorporates the same durability, accuracy, and quality into a new bench top controller packed with features and functionality that is remarkably easy to use. The Additel 780 series offers two base ranges: to 1,000 psi (70 bar) and to 3,000 psi (200 bar). The base range establishes the maximum controlling range of the controller. Each configuration includes a control sensor which is preselected to the sensor range best suited for your application. External and internal sensors can be used which allows for expanded range and accuracy capability in the future.

There are also two controller types that can be selected: the Additel 780S is the standard controller option without any measurement capability. The Additel 780 has expanded functionality including electrical measurement and HART and Profibus PA communication.

#### **MODULAR DESIGN**

Each unit comes with one Intelligent Pressure Module configured to the many range offerings provided. Standard accuracy sensors (ADT160A-CPXXX) are silicone pressure sensors with a 1 year accuracy of 0.02% FS. The precision accuracy models improve the 1 year accuracy specification to 0.01% of reading from 100% to 30% of range. Each sensor has been specially aged, tested and screened before assembly. After assembly each sensor

is temperature compensated over the range of 0°C to 50°C. The Additel 780 series allows for one internal pressure sensor and one external pressure sensor. The modular design of this unit provides for interchangeability of both the internal and external sensors with other Intelligent Pressure Modules.

In addition to the Intelligent Pressure Modules, the Additel 780 series has a built in barometric sensor. This allows for switching between gauge pressures to absolute pressures.

#### **STANDALONE SOLUTION**

Typical pressure controllers will require a nitrogen bottle for the gas supply which make it difficult to move the controller around without having to move or connect to another bottle. The Additel 780 series is unique in that with the optional electric pump, you can generate pressures to 1,000 psi (70 bar) without the need of a gas bottle.

#### PROCESS FUNCTIONALITY (excl ADT780S versions)

The 780 Series Pressure Controller is considered to handle a very wide range of applications which may normally require a pressure calibrator. Built-in capability, includes current and voltage measurement capability, 24 volt loop power, HART<sup>®</sup> and Profibus PA communication, switch measurement capability, and much more.

Specification	ADT780-1K	ADT780-3K	
Pressure range	-14.5 to 1,000 psi (-0.95 to 70 bar)	-14.5 to 3,000 psi (-0.95 to 200 bar) <sup>[1]</sup>	
Control stability	0.003% FS (stability based on % FS of contro	bl sensor range)	
Precision (includes 1 year stability)	See pressure range table		
Media	Clean gas		
Over-range indication	103% to 120% (based on sensor)		
Resolution	4, 5, 6, or 7 digits (user selectable) <sup>[2]</sup>		
Pressure type	Gauge, Absolute		
Warm up time	15 minutes		
Measurement units	Pa, hPa, kPa, MPa, bar, mbar, psi, mmHg@0°C,cmHg@0°C, mHg@0°C, inHg@0°C, inH <sub>2</sub> O@4°C, mmH <sub>2</sub> O@4°C, cmH <sub>2</sub> O@4°C, mH <sub>2</sub> O@4°C, mmH <sub>2</sub> O@20°C, cmH <sub>2</sub> O@20°C, mH <sub>2</sub> O@20°C, kg/m <sup>2</sup> , kg/cm <sup>2</sup> , mtorr, torr, atm, lb/ft <sup>2</sup> , tsi, user selectable		
Minimum control pressure <sup>[3]</sup>	0.0001 psi 0.001 psi		

[1] HP gas supply required to reach 3,000 psi (200 bar).

[2] 7 digit resolution for precision model only.

[3] Dependent on pressure module.

#### **BAROMETRIC MEASUREMENT SPECIFICATION**

Sensor	Gauge	Absolute
Standard Sensors	N/A	40 Pa <sup>[1]</sup>
Precision Sensors	3 Pa <sup>[2]</sup>	N/A

Barometer range (60~110)kPa, the accuracy is 40 Pa (11 Pa is optional)

[1] 40 Pa uncertainty (k=2) includes calibration uncertainty, linearity, and long term stability (<30 Pa per year). Barometer range of 60 to 120 kPa.</li>
 [2] Combined linearity, hysteresis, and repeatability. Add 3 Pa when used in gauge mode. When using the precision sensors with the ADT780 controller in gauge mode, regular zeroing will realign the barometric reading to provide the most accurate result.

#### ELECTRICAL MEASURE SPECIFICATIONS<sup>[1]</sup>

Specification	Range	Resolution	Accuracy
Volts DC	-30 to 30 V	0.1 mV	±0.01% rdg + 1.5 mV
VOITS DC	-300 to 300 mV	1 µV	±0.01% rdg + 15 μV
Current DC	-30 to 30 mA 0.1 µA		±0.01% rdg + 1.5 μA
Switch test	If the switch has detected voltage, the range is from $3-24$ V		
DC 24V output	24 V ± 0.24 V, max 30 mA		

[1] Not available in ADT780S versions

#### **PHYSICAL SPECIFICATIONS**

Specification	ADT780-1K & ADT780-3K
Power	100 to 240 V, 50/60 Hz
Pressure ports	G1/8 F
Storage temperature	-20°C to 70°C
Operating environment	0-90% RH non-condensing
Display	7 inch (17.8 cm) color, touch screen display
Weight	33 lbs (15 kg)
Dimensions (DWH)	16.5 x 17.3 x 5.2 inch (419 x 440 x 132 mm)
Mounting	Standard desktop, optional rack mount kit
Shock	4G
Vibration	1G 10Hz~500Hz

#### **OTHER SPECIFICATIONS**

WiFi specifications	802.11 b, g, and n
Vent	Front panel vent and safety release button (only for 780S)
Communications	RS232, USB, LAN, WIFI
Stability indicator	User selectable
Operating modes	Control, measure, and vent
Disalas as de s	Controller – show pressure indication and control
Display modes	Calibrator – shows pressure indication, control, and electrical measurement (excl ADT780S)
Localization	English, Chinese (simplified), German, Spanish, French, Italian, Portuguese, Russian, Japanese
Conformity	CE
Calibration certification	ISO 17025 accredited certificate of calibration with data included
Warranty	1 year

[1] Contact Additel for other range options.

[2] Accuracy includes calibration uncertainty, linearity and long-term stability.

\*\*Low pressure sensors (ADT160A-XX-DPX) available for low pressure and differential pressure measurement. Also available for low pressure control (gauge mode only). Ranges from ±1 inH<sub>2</sub>0 (2.5 mbar) to 300 inH<sub>2</sub>O (700 mbar).

•

## **Electric Pump**

#### Additel 780-1K-EPUMP

- Generates Vacuum to 1,000 psi (70 bar)
- Built-in filter and liquid trap

#### ■ 1,000 psi (70 bar) Electric Pump Specifications

Pressure range	-13.5 to 1,080 psi (-0.95 to 75 bar)
Weight	69.6 lbs (31.6 kg)
Size(WHD)	17.3 X 9.3 X 21.7 inch (440 X 235X 550 mm)
Power	100 to 240 V
Media	Air
Volume	150 mL
Outlet port	G1/8 F
Storage temperature	-20°C to 70°C
Operating environment	0-90% RH non-condensing
Mounting	Standard desktop, optional rack mount
Control operation	2 LED displays with pressure limit settings
Typical max pressure time	Approx 2 min with ADT780 Controller

## Additel 160A Intelligent Digital Pressure Modules

- Pressure ranges to 60,000 psi (4,200 bar)
- Precision accuracy to 0.01% RD
- Pressure measurement accuracy of 0.02% FS
- Fully temperature compensated accuracy

Metrology Made Simple

#### **OVERVIEW**

Gauge pressure

**Differential pressure** 

With advanced microprocessor technology and state-of-the-art silicon pressure sensors, the Additel 160A series Intelligent Digital Pressure Module (IDPM) provides an accurate, reliable, and economic solution for wide range of pressure applications. It is loaded with functionality and remarkably easy to use. In order to reach the best performance, every silicon pressure sensor in the module has been specially aged, tested and screened before assembly. Designed as external pressure module for Additel 760 automatic handheld pressure calibrator, Additel 761 automated pressure calibrator and Additel 222A, Additel 223A and Additel 780 calibrators, the Additel 160A IDPM is unmatched in performance and reliability.

#### **FEATURES**

- Precision sensor measurement accuracy to 0.01% RD
- Gauge pressure measurement accuracy of 0.02% FS
- Absolute Pressure measurement accuracy of 0.1% FS
- Pressure ranges to 60,000 psi (4,200 bar)
- Advanced temperature compensation
- ISO 17025 accredited calibration and data included

#### **PRESSURE RANGE**

Differential Pressure								
P/N	Pressure	e Range <sup>[1]</sup>	Media	Accuracy	Burst	Static Pressure		
F/IN	(inH <sub>2</sub> 0)	(mbar)	Media	(%FS)	Pressure	Range

# Additel 672 Digital Pressure Calibrators

- Pressure ranges to 60,000 psi (4,200 bar)
- HART Communication capability
- Measure mA or V, and with 24V loop power
- Easy-to-use, inexpensive pressure calibrator with uncertainty better than 0.02%FS

Addite

Metrology Made Simple

### **OVERVIEW**

At first glance, the 672 series precision pressure calibrators look like an ordinary pressure gauge. But this series is much more than ordinary, and definitely more than just a pressure gauge—it's a pressure calibrator! With advanced microprocessor technology and state-of-the-art silicon pressure sensors, the 672 series precision pressure calibrators provide a pressure calibration solution for gauges, transmitters, and switches over a wide pressure range. The 672 is the size of a pressure gauge but with the functionality of a calibrator: It measures precisely with a built-in pressure sensor, as well as reads the current or mV produced by a transducer. It can even supply an excitation voltage to power sensors or transmitters during calibration. In order to reach 0.02%FS accuracy up to 10,000 psi (700 bar) and 0.1%FS accuracy up to 60,000 psi (4,200 bar), every silicon pressure sensor has been specially aged, tested, and screened before assembly. The 672 series precision pressure calibrators are unmatched in performance and reliability.

### **FEATURES**

- Pressure ranges to 60,000 psi (4,200 bar)
- Measure mA with 0.01% RD + 1.5 µA accuracy Measure V with 0.01% RD + 1.5 mV accuracy
- Power transmitters during test using 24V loop supply
- Pressure switch test
- HART Communication capability
- Advanced temperature compensation

- Dual readout
- Min/Max/Hold to capture changing measurements
- Data logging
- Large, easy to read display with 6-digit resolution
- Backlit display
- Rechargeable battery or AC adapter
- ISO 17025 accredited calibration with data (Included)

### **SPECIFICATIONS**

#### Accessories Included

110 V/220 V external power adapter (DC 10 V)

2 pieces test leads (1.5-meter) and 2 pieces alligator clips

2 pieces 0.236 inch (Ø6 mm) test hose

(for differential pressure gauge only)

Additel/Land software (free download at www.additel.com)

innoud at min.addi

Manual

ISO 17025 accredited calibration certificate

#### Optional Accessories

Model number	Description
9702	Spare rechargeable Li-ion polymer battery for 672
9816	Spare 110 V/220 V external power adapter (DC 10 V) for ADT22X and ADT672 calibrator
9502	Additel/Log II real time data logging and graphical software for 681 and 672
9530-BASIC	Additel/Acal Automated calibration software with asset management, basic version
9530-NET	Additel/Acal Automated calibration software with asset management, network version, Includes server installation and 1 user license
9050	USB to RS232 (DB9/M) Adapter
9050-EXT	RS 232 (DB9/M) extension cable, 9 feet
9900-672	Carrying Case for one 672 digital pressure gauge
9022	Spare 2 pieces test leads (1.5-meter) and 2 pieces alligator clips

# Understanding Accuracy Specifications for Digital Pressure Sensors – Percentage of Full Span Versus Percentage of Reading

Specifications for digital pressure gauges can sometimes seem confusing or overwhelming, especially, if you are unfamiliar with the terminology. Some pressure sensors will specify accuracy as a percent of full span (FS) while others provide the specification as a percent of reading. So why are there different ways of specifying the accuracy of pressure sensors and is percent of reading more accurate than percent of full span or vise versa? This brief technical note will discuss the two differences and answer these questions.

### Percentage of Reading Accuracy

Figure 1 - Percent reading accuracy example Full scale: 0 to 100 psi Accuracy: 20 to 100% FS: 0.1% of reading 0 to 20% FS: 0.02% of FS

psi		Accuracy (psi)	
0	0.02		
10	0.02	0.02%FS	
20	0.02		
30	0.03		
40	0.04		
50	0.05		0.10/ -6
60	0.06		0.1% of Reading
70	0.07		Teauing
80	0.08		
90	0.09		
100	0.10		

Accuracy as a percentage of reading is accomplished by multiplying the accuracy percentage by the pressure reading. Thus, the lower the pressure measurement, the better the accuracy. Instruments that have a percent reading specification are accompanied with a floor specification. The floor specification takes into account uncertainties such as resolution and measurement noise which may be negligible at higher pressures but are of much more significance at lower pressures.

For example, an accuracy specification may read 0.1% of reading for 20 to 100% of range and 0.02% of full scale below 20% of the range. The 0.02% of full scale specification is considered the floor specification. To understand the accuracy of the sensor, the user is then required to know where the floor spec is applicable and the full scale of the sensor.

This method of specification is often used because it aligns well with the typical performance of pressure gauges. Typically, the closer you measure to barometric pressure the better the performance of the gauge. Figures 1 and the graph below show an example specification for a 100 psi gauge and its accuracy in psi.

### Percentage of Full Scale Accuracy

Metrology Made Simple

#### Accuracy psi (psi) 0 0.05 10 0.05 20 0.05 30 0.05 40 0.05 0.05%FS 50 0.05 60 0.05 70 0.05 80 0.05 90 0.05 100 0.05

Accuracy as a percentage of full scale is calculated by multiplying the accuracy percentage by the full scale pressure of the gauge. This is obviously a more simple method of specification and is most commonly used in industry because it is easy to calculate and interpret. Denoting the accuracy as percent full scale is a more conservative way of specifying the pressure sensor because typically the sensor doesn't perform the same over its full range. It usually will perform more accurately as you approach barometric pressure. This type of specification is most common for industrial gauges which make it easier to compare one gauge versus another. Figure 2 is an example specification for a 100 psi gauge and its accuracy in psi.

### A Comparison of Percent of Full Scale and Percent of Reading Accuracies

psi	Accuracy (psi)				
hai	0.1% of Reading	0.05% of FS	0.02% of FS		
0	0.02	0.05	0.02		
10	0.02	0.05	0.02		
20	0.02	0.05	0.02		
30	0.03	0.05	0.02		
40	0.04	0.05	0.02		
50	0.05	0.05	0.02		
60	0.06	0.05	0.02		
70	0.07	0.05	0.02		
80	0.08	0.05	0.02		
90	0.09	0.05	0.02		
100	0.10	0.05	0.02		

So you may ask, "Which is more accurate?" The answer is that it depends on the pressure being measured. In the two examples given, the gauge specified at 0.1% of reading is more accurate as you measure lower pressures in its range. However, as you move above 50% of the range, the gauge specified at 0.05% of full scale becomes more accurate than the 0.1% of reading gauge. This can be seen clearly in the chart (left) and graph (below) where the two gauges are compared in terms of psi accuracy. To properly compare these, two gauges you should convert the accuracy to pressure units, such as psi or bar. Then they can be properly matched one against another in like units of measure.

In conclusion, one method of specification is not better than another, it is just different. Given this difference it becomes important to know how to interpret the different specifications types and be able to compare one versus another.

### Accuracy Comparison 0.1% Rdg to 0.05%FS and 0.02%FS

## Additel 681 Digital Pressure Gauges

- Pressure ranges to 60,000 psi (4,200 bar)
- 0.02%, 0.05%, 0.1%, 0.2% FS or 0.1%RD accuracy
- % pressure indication with fan-shaped graph scale for visual reference
- Fully temperature compensated accuracy
- Panel mount gauges are available
- Intrinsically safe version (681IS)
- Data logging option
- IP67 rated (681IS)

### **OVERVIEW**

With advanced microprocessor technology and state-of-the-art silicon pressure sensors, the 681 series digital pressure gauges provide an accurate, reliable, and economic solution for a wide range of pressure applications. They are loaded with functionality and remarkably easy to use. To reach the best performance, every silicon pressure sensor in our gauges is specially aged, tested and screened before assembly. At Additel, fully temperature compensated accuracy means every sensor is pressure tested at several environmental temperatures from -10°C to 50°C. With this test data individual coefficients are generated and stored in the gauge characterizing its performance over the full temperature compensated range. And now the ADT681IS comes with an IP67 rating meaning it is dust resistant and water proof, submersible in 1 meter of water.

### Designed to fit your need

Additel pressure gauges give you the widest variety of sensor choices on the market. Whether you require low inches of water measurement or very high pressure measurement, we have a gauge that will meet your need. We offer sensors which are  $\pm 1$  inH<sub>2</sub>O ( $\pm 2.5$  mbar) to 60K psi (4,200 bar) and everything in between.

Do your applications require you to measure both positive and vacuum pressure? Our compound gauges do not compromise accuracy and provides you with the same high accuracy specification on both positive and vacuum pressures. We offer a wide variety up to 300 psi (20 bar). If you need a higher range, just contact us and we can likely customize one to meet your need. We also offer absolute pressure sensors to 5K psi (350 bar) and a full range of differential pressure sensors from  $\pm 1$  inH<sub>2</sub>O ( $\pm 2.5$  mbar) to  $\pm 300$  inH<sub>2</sub>O ( $\pm 700$  mbar). Are you looking for a pressure gauge to use in hazardous areas? Our certified (ATEX, CSA US & IECEx) intrinsically safe models (681IS) are designed for pressure measurement in hazardous areas.

If you need to panel mount our sensors, we offer the option (see ordering information) for a back-mounted pressure port and gauge housing designed to fit in a panel. And most recently, we've added the option to do stand-alone data logging with the 681. Now you can record more than 21,000 records internal to the 681 series. Each record includes date, time, pressure and temperature readings. Download the logged data with our free Additel/Land software or you can purchase our Additel/Log II for real-time logging and data analysis. The 681 series digital pressure gauges are unmatched in performance and reliability. Best of all, they are very affordable.

### **FEATURES**

- Pressure ranges to 60,000 psi (4,200 bar)
- 0.02% full span accuracy (681-02)
  - 0.05% full span accuracy (681-05)
  - 0.1% full span accuracy (681-10)
  - 0.2% full span accuracy (681-20)
  - 0.1% reading span accuracy (681-RD)
- IP67 rated: Submersible in 1 meter of water(681IS)
- Fully temperature compensated accuracy from 14°F to 122°F (-10°C to 50°C)
- Up to eleven selectable pressure units
- Large, easy to read display with 5-digit resolution
- Look us up on www.additel.com or call today (1)714-998-6899

- Backlit display
- % pressure indication with fan-shaped graph scale for visual reference
- Display flash warning when pressure over 120% of FS
- Bottom mount or panel mount
- ATEX certified intrinsically safe (Model 681IS)
- ISO 17025 accredited calibration with data(included)
- 9V battery power or AC adapter (optional)
- Data logging to 21,843 records (includes date, time, pressure and temperature)

### Additel 680 Series Digital Pressure Gauges

- 0.05%, 0.1% or 0.25%FS accuracy
- Fully temperature compensated accuracy
- IP67
- Data logging and wireless (680W)

### **OVERVIEW**

We designed the 680 series digital pressure gauges with two main objectives in mind. First, to provide an affordable digital gauge to replace mechanical gauges. If you're looking to move from dial gauges to a digital gauge, you'll find the 680 standard version gauge to be of high quality and suited for your need in terms of price and performance. With advanced microprocessor technology and state-of-the-art silicon pressure sensors, the 680 series digital pressure gauges provide an accurate, reliable, and economic solution for a wide range of pressure applications. They are loaded with functionality and remarkably easy to use. To reach the best performance, every silicon pressure sensor is specially aged, tested and screened before assembly.

The second objective was to provide a high-precision pressure gauge capable of wireless communication and data logging. Our 680W series provides just this along with several accuracy and pressure range options to meet your need. This wireless unit is compatible with the Additel/Land Wireless software, which is available for a free download from our website. Data can be recorded standalone with the 680W and then downloaded wirelessly to Additel/Land Wireless. For more advanced logging and data analysis, Additel/Log II Wireless is specially designed to communicate with the 680W. Each unit can store up to 140,000 readings which consist of date, time, pressure, and internal temperature. The 680 series digital pressure gauges are unmatched in performance and reliability. Best of all they are very affordable.

### **FEATURES**

- Pressure ranges to 60,000 psi (4,200 bar)
- 0.05%, 0.1% or 0.25% full span accuracy
- Fully temperature compensated accuracy from 14°F to 122°F (-10°C to 50°C)
- Up to 13 user-selectable pressure units, 6 selectable engineering units
- Large, easy to read display with 5-digit resolution
- Backlit display

**SPECIFICATIONS** 

Icon-based menu

- Display flash warning when pressure exceeds 120% of FS
   Stainless wetted surface construction
- Stainless wetted surface construction
- IP67 (submersible in 1 meter of water)
- Drop-tested from 1 meter
- 2 AA alkaline batteries
- CE R&TTE, FCC ID, IC ID Certificates
- ISO 17025 accredited calibration with data(included)

### **SPECIFICATIONS**

Model	ADT680	Metrology Made Simple			
Model	AD1000	Wireless Frequency: 2.4 G ISM Bands, 20 meter range			
Wirelass Communication		Number of wireless Channels : Chanel 1-15			
Wireless Communication (ADT680W only)	N/A –				
(		Software: Wireless network demo software included read up to 20 gauges.			
		Storage Capacity: 140,000 readings (time, pressure, and temperature)			
Data Logging		Storage Interval: Adjustable from 1-9999 Sec			
(ADT680W only)	N/A	Single-button-press data logging enabled			
		Key Lockout: When the gauge is in auto-storing mode, the			
		front panel buttons will be automatically locked.			
Filtering	Averaging (3 to 10 samples) or low-pass first-order filter.				
Max/Min data capture	Saves Max and Min data during pressure measurement.				
Pressure units	Pa, kPa, MPa, bar, mba, psi, kgf/cm <sup>2</sup> , mmH <sub>2</sub> O, mmHg, inH <sub>2</sub> O	, inHg, ozf/in, %, °C, °F			
	Engineering units: inH <sub>2</sub> O(20°C), inH <sub>2</sub> O(60°F), mmH <sub>2</sub> O(20°C),	mmH <sub>2</sub> O(15°C), ftH <sub>2</sub> O(60°F), or ftH <sub>2</sub> O(4°C)			
	LCD Specification: FSTN-LCD, Visual scope 36x61 mm				
	Full 5 digits, 15.2 mm High				
Display	7 segment analog bar graph scaled from 0-100% of FS				
	Backlight: White				
	Backlight Duration: Not auto off,15,30,45,60 seconds optiona	d			
Auto off	Disabled, 15, 30, 45, 60, 90, or 120 Minutes				
	Certificates: CE R&TTE, FCC ID, IC ID				
Compliance	Protection Level: IP67				
	Vibration: 5 g (20-2000Hz)				
	Shock resistance: 100 g/11 ms				
	≤ 15,000 PSI: 1/4NPT male, 1/2NPT male, 1/4BSP male, 1/2	BSP male, M20×1.5 male			
<b>_ _</b> .	>15,000 PSI: 1/4HP female or 1/4HP male				
Pressure Port	*1/4HP female: Autoclave F-250-C, 9/16" - 18 UNF-2B *1/4HP male: Autoclave M-250-C, 9/16" - 18 UNF-2A				
	Other connections available per request.				
Overpressure Alarm	Display will flash over 120%FS				
Battery voltage Indicator	Displays the battery life remaining. When the battery voltage	is too low, the gauge will power-off automatically.			
Battery Life	1500 hours (10 readings/sec), 3000 hours (3 readings/sec), 6000 hours (1 readings/sec), 12000 hours (1 readings/15 s) (100 hours when wireless communication is on)				
Overpressure Record	Gauge will record max pressure data when the gauge is over	r pressured by 120% of FS.			
Leakage test	In leak test mode, the gauge will record beginning pressure, ending pressure, and show the difference $\Delta P$ .				
Factory Reset	Resets all settings back to factory default, except the calibration parameters.				
Warranty	1 year

### Metrology Node Simple ADT875 Series Dry Well Calibrator

More than just a stable heat source!

- Three models ranging from -49 ⊂ to 660 ⊂
- Portable, rugged, and quick to temperature
- Metrology-level performance in stability, uniformity, accuracy and loading effect
- Dual-zone central
- Process calibrator option provides a matti-channel readout for a reference. thermometer, RTDs and TCs, task decumentation , and HART communication
- Color touch screen display
- Choose your own range option
- Set point control by reference.
- Self-eatilization feature

### **Application Note**

### Why Temperature Compensation Really Matters for Pressure Measurement

Have you ever wondered how much impact environmental temperature has on your pressure sensors? Nearly every pressure sensor has some sort of environmental temperature specification on its data sheet. This technical note explains the environmental temperature effects on pressure sensors, quantifying the impact, and ways to minimize the impact.

### Why pressure sensors are impacted by environmental temperature changes

Much like anything else in the physical measurement world, pressure sensors are subject to changes in environmental conditions. Temperature effects tend to have the largest impact on pressure measurement accuracy. Temperature effects directly influence the pressure sensor and the circuitry used to measure the sensor. Digital pressure sensors use electronic circuits which provide an analog output proportional to the inlet pressure. There are three factors of a sensor's circuitry that are affected by environmental temperature changes: zero pressure output voltage, pressure sensitivity span and bridge resistance. Temperature-compensated sensors employ some techniques to correct for and minimize the impact of temperature changes on these factors.

To understand the environmental temperature effect on your sensor, it is helpful to first understand some common terms you may see on a pressure sensor specification sheet.

**Operating Temperature Range:** This is the temperature range over which the sensor can be used without causing damage.

**Temperature Compensated Accuracy Range:** This refers to the environmental temperature range over which the accuracy of the sensor is applicable.

**Temperature Coefficient:** An additional error that needs to be considered when used outside of the temperature compensated accuracy range. Many sensors are only tested and calibrated at laboratory temperatures. In this case, the temperature coefficient will need to be considered in the measurement accuracy when using the sensor outside of laboratory temperatures.

### Quantifying the environmental temperature effect

So how much will the ambient temperature impact your measurement accuracy? Well, this will depend on the temperature compensated accuracy range and the temperature coefficient. To demonstrate this, let's consider three different gauges. As you can see from the specifications below (figure 1), they all have the same accuracy specification of 0.05% FS. However, as you consider the temperature compensated accuracy range and the temperature coefficient you'll see a fairly large variation between the three gauges.

Figure 1	Manufacturer 1	Manufacturer 2	Manufacturer 3
Accuracy	0.05% FS	0.05% FS	0.05% FS
Temperature Compensated Accuracy Range	N/A	15°C to 35°C	-10°C to 50°C
Temperature Coefficient	Add 0.003% FS/°C from 23°C	Add 0.003% FS/°C: -10°C to 15°C, 35°C to 50°C	N/A

The graph below shows the total specified accuracy when considering the temperature effects on the pressure gauges. As you can see in one case here, the lack of temperature compensation and inclusion of the temperature coefficient specification more than triple the 0.05% FS accuracy specification

#### Temperature compensation test results

To further show temperature compensation has real effect, we placed a non-temperature compensated pressure gauge in a temperature chamber and pressure tested it from 0 to 580 psi (0 to 40 bar) and over the environmental temperature range of 0°C to 40°C. We then performed the same test on a temperature compensated gauge. As you may expect—the higher the pressure, the larger the impact from the environmental temperature. Below is a chart comparing the non-temperature compensated gauge with the temperature compensated gauge.

### **Temperature Compensation Effect**

#### Minimizing environmental temperature error

The temperature effect on a pressure sensor will be negligible when used at the same laboratory temperature in which it was calibrated. This, however, is often not practical for your measurements.

With sensor technology advances, we have found a variety of ways to minimize the temperature effect on pressure sensors and with confidence define a large temperature compensated accuracy range. First, regularly zero your digital pressure gauges. By zeroing the pressure gauge, you are aligning the zero pressure output voltage to the current environmental conditions. You should only zero the pressure gauge when you do not have any inlet pressure on the gauge.

Because each sensor is unique and performs differently due to environmental temperature changes, at Additel, we pressure test every sensor in a thermal chamber at different temperatures so we understand its pressure performance relative to environmental changes. Each sensor contains a temperature-compensated circuit which we load coefficients representing the temperature testing of the gauge. This allows for you to confidently use our sensors over the range -10°C to 50°C without having to add a temperature coefficient error to the accuracy.

### Additel 901B Low Pressure Test Pump

- Generate 6 psi (0.4 bar) vacuum to 6 psi (0.4 bar) pressure
- Portable, only 3.5 lb
- Great stability and high resolution
- Minimal maintenance
- Hand-tight quick connectors

### **OVERVIEW**

The 901B Low Pressure Test Pump is a hand operated pressure pump designed to generate pressures from -6 psi (-0.4 bar) to 6 psi (0.4 bar). A high-quality screw press is designed for fine pressure adjustment, with an adjustment resolution up to 0.1 Pa (0.001 mbar). The 901B is a very stable low pressure calibrator. It makes use of an isothermal bellows chamber which is designed for reducing the possible effects of environmental temperature change. Most pumps make use of a check valve (non-returning valve) and are not well insulated which will cause large fluctuations in pressure with a change in ambient temperature or when the unit is touched. The 901B does not use a check valve and is remarkably stable. Two hand-tight connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 901B is an ideal comparison test pump for low pressure applications.

**SPECIFICATIONS** 

**Generated Pressure Range** 

Ram/adapters: SS

Body: SS, aluminum

female, or M20X1.5 female

Weight: 3.5 lb (1.6 kg).

Warranty: 1 year.

Dimensions: Height: 5.7" (145mm)

Media: Air.

Material:

Connection

gauge.

### **FEATURES**

- Portable: Only 3.5 lb (1.6 kg)
- Adjustment Resolution

0.1Pa (0.001 mbar); Specially designed screw press for fine pressure adjustment.

Great Stability

Isothermal chamber: the pressure chamber is insulated to reduce the influence from environmental temperature changes. Specially designed bellows minimize leakage to

guarantee excellent stability.

 Durable and Minimal Maintenance

Without non-returning valve that is usually used on troublesome hand pump.

Easy-to-use

Pressure could be set and adjusted precisely and quickly through a simple turn of the handle.

Hand-tight Quick Connectors

Allows easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches.

### **OVERVIEW**

The 912A Pneumatic Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 95% vacuum to 60 psi (4 bar). A high-guality screw press is designed for fine pressure adjustment, with an adjustment resolution up to 0.1 Pa (0.001 mbar). The 912A is a very stable low pressure calibrator. It makes use of an isothermal bellows chamber which is designed for reducing the possible effects of environmental temperature change. Most pumps make use of a check valve (non-returning valve) and are not well insulated which will cause large fluctuations in pressure with a change in ambient temperature or when the unit is touched. The 912A does not use a check valve and is remarkably stable. Two hand-tight connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 912A is an ideal comparison test pump for low pressure application.

### **FEATURES**

- Portable: Only 6.2 lb (2.8 kg)
- Adjustment Resolution 0.1 Pa (0.001 mbar)

High-quality screw press for fine pressure adjustment Great Stability

Isothermal chamber: the pressure chamber is insulated to reduce the influence from environmental temperature changes

Specially designed bellows minimize leakage to guarantee excellent stability

Shut-off valve closes the air in the isothermal chamber during calibration

#### **Durable and Minimal Maintenance**

Built-in gas-liquid isolator protects the pump from moisture and dirt

- Easy-to-use
- Hand-tight Quick Connectors

Allows easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches

### Additel 914A Handheld Pneumatic Pressure Test Pump

- Generate 95% vacuum to 375 psi (25 bar) pressure
- Portable, only 3.3 lb
- Great stability and high resolution
- Minimal maintenance
- Hand-tight quick connectors

Generated Pressure Range: 95% vacuum to 375 psi (25

Seals: Buna-N, PTFE, Copper Alloy

Hand-tight connectors for both test gauge and

1/4NPT female, 1/2NPT female, 1/4BSP female,

ddite

Metrology Made Simple

### **OVERVIEW**

The 914A Pneumatic Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 95% vacuum to 375 psi (25 bar). A high-quality screw press is designed for fine pressure adjustment, with an adjustment resolution up to10 Pa (0.1 mbar). A specially designed shut-off valve makes the pressure as stable as possible during calibration. A built-in gas-liquid isolator protects the pump from moisture and dirt to reduce the need for maintenance. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 914A is an ideal comparison test pump for pressure instruments calibration.

Metrology Made Simple

### **OVERVIEW**

The 917 Pneumatic Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 95% vacuum to 1,000 psi (70 bar). A high-quality screw press is designed for fine pressure adjustment, with an adjustment resolution up to 10 Pa (0.1 mbar). A specially designed shut-off valve makes the pressure as stable as possible during calibration. A built-in gas-liquid isolator protects the pump from moisture and dirt to reduce the need for maintenance. The 917 can be special ordered to comply with oxygen free applications. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 917 is an ideal comparison test pump for pressure instruments calibration.

**SPECIFICATIONS** 

Generated Pressure Range

Material: Ram/adapters: SS

Piston volume: 27 ml (1.6 in<sup>3</sup>)

Media: Air.

### **OVERVIEW**

The 919A High Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 95% vacuum to 2,000 psi (140 bar). With a long lever, it just takes 30 seconds to reach 2,000 psi (140 bar). A high-quality screw press is designed for fine pressure adjustment, with an adjustment resolution up to 0.001 psi (10 Pa , 0.1 mbar). A specially designed shut-off valve makes the pressure as stable as possible during calibration. A built-in gas-liquid isolator protects the pump from moisture and dirt to reduce the need for maintenance. The residual liquid in the pump introduced from the devices under test will be collected and then pushed out during pressure release. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 919A is an ideal comparison test pump for pressure instruments calibration.

**SPECIFICATIONS** 

(140 bar) positive pressure

Material: Ram/adapters: SS

### **Application Note**

### Improved Methods for High Pressure Pneumatic Calibrations in the Field

Are you tired of dragging a nitrogen bottle and dead weight tester out to the field to perform pneumatic high pressure calibrations? Does it trouble you to use a hydraulic pump or dead weight tester for your gas gauges every time you have to go above 600 psi? This application note details the limitations to traditional methods and provides a solution to calibration of gas gauges up to 3,000 psi (200 bar) with a field-ready calibration tool.

### **Limitations with Traditional Methods**

Traditional methods for performing high pressure gas gauge calibrations in the field require the use of a controller or comparison systems and a nitrogen bottle. This solution typically provides the performance needed to do the job but adds a considerable inconvenience in having to transport several pieces of heavy equipment to the calibration site. Not to mention the time and effort in setting up the system. Dead weight testers and hydraulic pumps have also been used as a solution. Hydraulic pumps are problematic for this application as the liquid can damage the gas gauge you are attempting to calibrate. It is common that these hydraulic comparison pumps also lack the stability and resolution required to calibrate many gas gauges. Dead weight testers typically have the accuracy required but will require a gas supply for high pressure pneumatic applications. If the dead weight tester uses hydraulic fluid as the medium it will achieve much higher pressures but has similar drawbacks as hydraulic pumps.

### A More Practical Solution

Additel developed their high pressure pneumatic pumps specifically to address high pressure gas calibrations in the field. The Additel 919A goes to 2,000 psi (140 bar) and the 920 goes to 3,000 psi (200 bar) without the use of hydraulic fluids or the need for a gas supply. Each pump can also generate to 95% of vacuum. The ADT920 will generate 3,000 psi (200 bar) in 40 seconds and the pump weighs about 14 lbs (6.5 kg) which makes it easy to take to the field.

The high pressure range, portability, and speed to pressure are not the only things that make this series of pumps unique. The Additel pneumatic pump design allows for high stability and resolution to 0.001 psi (0.1 mbar). Like many pumps on the market, the ADT919A and the ADT920 use a check valve, also referred to as a non-returning valve, to protect the pump from contaminants that could cause damage. However, we've seen with most pumps on the market that the check valve tends to lose its seal over time which causes unstable measurements. The Additel design incorporates a high-quality isolation valve and screw press which allows for you to isolate the calibration volume from the check valve and achieve very stable measurements and resolution to 0.001 psi (0.1 mbar). The diagram below illustrates the pump construction.

Isolation

The method of operation is as follows: To generate pressure, use the pump handle on top of the unit. When you've generated 70% - 80% of the desired pressure with the pump handle, then close the isolation valve (this isolates the calibration volume from the pump handle and check valve). Next, use the fine-adjust screw press to generate the remaining pressure. Each pump comes with two hand-tight, quick-connect pressure ports that do not require the use of PTFE tape or wrenches. Combine this pump with any of our digital pressure gauges and you have an accurate, portable and practical field calibration solution for gas calibrations up to 3,000 psi (200 bar).

### Conclusion

Traditional solutions for high pressure gas calibrations are not convenient or practical for field applications or they require the use of hydraulic fluids which could damage the sensor being tested. The Additel 919A and 920 pneumatic pressure pumps solve many of the problems that exist with traditional solutions and provide a reliable, field-ready, accurate and affordable solution to meet your needs!

Additel 920, 920HV Series High Pressure Test Pump

- Generate 95% vacuum to 3,000 psi (200 bar) pressure
- Generate 3,000 psi (200 bar) in 40 seconds
- Minimal maintenance
- Hand-tight guick connectors
- High volume model available

### **OVERVIEW**

The 920 and 920HV High Pressure Test Pump are hand operated pressure pumps designed to generate pressure from 95% vacuum to 3,000 psi (200 bar). With a long lever, it takes just 40 seconds to reach 3,000 psi (200 bar). The high volume (HV) model has been outfitted with a higher volume pump to provide added capacity. A quality screw press is designed for fine pressure adjustment, with an adjustment resolution up to 10 Pa (0.1 mbar).

A specially designed shut-off valve makes the pressure as stable as possible during calibration. A built-in gas-liquid isolator protects the pump from moisture and dirt to reduce the need for maintenance. The residual liquid in the pump introduced from devices under test will be pushed out and collected during pressure release. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 920 is an ideal comparison test pump for pressure instruments calibration.

### **FEATURES**

High Efficiency

Generate 3,000 psi (200 bar) in 40 seconds.

- Adjustment Resolution 0.001 psi (10 Pa, 0.1 mbar). High-quality screw press for fine pressure adjustment.
- Great Stability

A specially designed shut-off valve makes the pressure as stable as possible during calibration.

### **Durable and Minimal Maintenance**

Built-in gas-liquid isolator protects the pump from moisture and dirt.

The residual liquid in the pump introduced from devices under test will be collected and then pushed out and collected during pressure release.

Anticorrosive and wear resistant material are used to improve the reliability further.

Hand-tight Quick Connectors

Allows easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches.

### Additel 925 Handheld Hydraulic Pressure Test Pump

- Generate 85% vacuum to 6,000 psi (400 bar) pressure
- Portable, only 3.7 lb
- Minimal maintenance
- Increase and decrease pressure smoothly
- Hand-tight quick connectors

### **OVERVIEW**

ddite

The 925 Hydraulic Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 85% vacuum to 6,000 psi (400 bar). With the patented screw press technology, the high pressure can be easily generated, as well as increased and decreased smoothly. With no check valve (non-returning valve), the 925 avoids the troublesome leakage issues that is usually experienced with most hand pumps and allows for minimal maintenance. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 925 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers in the field or laboratory.

### **FEATURES**

- Portable
  - Only 3.7 lb (1.7 kg)
- Durable and Minimal Maintenance

Patented screw press technology, without non-returning valve inside that is usually used on troublesome hand pumps.

Easy-to-use

The high pressure can be generated easily, as well as increased and decreased smoothly.

Extremely Low Leakage

Patented screw press technology, replaces troublesome check valves (non-returning valve) used in most hand pumps which practically eliminates leakage.

Hand-tight Quick Connectors

Allows easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches.

### **Application Note**

### **Considerations for Hydraulic High Pressure Calibrations**

If you are doing high pressure, hydraulic calibrations there are a few things that you'll need to consider which will make your life a little easier and help you produce stable measurements. This application note focuses on considerations for pressure calibrations using a high pressure hydraulic pump to generate the pressure.

### **Getting Started**

To produce stable and high pressure measurements using a hydraulic calibration pump, the gas within the calibration system needs to be removed. Hydraulic test pumps use various types of fluids to generate high pressures. Because gas is much more compressible than liquid, purging most if not all the gas out of the system will allow for maximum pressures to be generated. The following steps describe the procedure to purge the gas from an Additel test pump:

1. Ensure the pump, reference standard, and device under test (DUT) are securely connected to the calibration pump.

2. Close the vent valve and screw out the main screw press. You should see a vacuum being pulled on your reference and DUT (assuming the reference and the DUT are able to be used for vacuum measurement).

3. Open the vent valve, wait for the pressure to settle to zero, and screw in the main screw press. As you do this, you may see bubbles emerge in the medium reservoir which is a good indication that gas is being pushed out of the system.

4. Close the vent valve and repeat steps 2 and 3 one or two more times.

5. Close the vent valve and unscrew the main screw press half way out. Then open the vent valve to zero the measurement.

6. Now, you are ready to close the vent valve and generate pressure.

### **Stable Measurements**

As pressures are generated to the desired test point it is common to initially observe a fairly rapid decrease in pressure. Initially, you may conclude that this is a pressure leak but what you are likely observing is called the adiabatic effect. This effect is defined as a gain or loss of heat within a system and its environment. When a gas is compressed under adiabatic conditions, its pressure increases and its temperature rises without the gain or loss of any heat. This happens when the screw press of a pump compresses the fluid volume, thus resulting in an increase in pressure but also an increase in the temperature. As the increase in pressure stops the temperature generated from the screw press dissipates. If the volume is held constant and the temperature decreases so also will the pressure decrease. So this initial degrease of pressure is in fact a result of the temperature settling from the adiabatic heating effect generated from the screw press of the pump.

Other sources of instability that also impact the pressure measurement are instabilities in room temperature and changes in volume. Because temperature is a factor of pressure as the entire pressure system changes temperature due to the room temperature changing the true pressure value will also change. The same can also be said of the pressure volume. With an increase or decrease of pressure volume the true pressure value will see a correlated change. Volume changes with pressure systems are usually not very noticeable except at high pressures. At high pressures, the materials where the pressurized volume is contained will slightly expand causing the volume to expand and the pressure will decrease. This is particularly evident when using flexible hoses at high pressures.

#### Conclusion

So we can't change the laws of physics—so what can be done? As pressures are generated, time must be given to allow for the adiabatic effects to settle. In other words, you need to let the measurement stabilize for a few minutes. As you allow this stabilization period to happen, you'll find the measurement stability of the pump to be very reliable for your calibration applications. Room temperature will also have an impact on the measurement and it is best if calibrations are performed in a controlled, stable environment. Lastly, careful consideration of hoses, manifolds, and tubing will help produce stable results at high pressures. Using metal tubing as opposed to flexible hoses will yield higher stability as metal is less likely to allow for the volume to expand when under high pressure.

Metrology Made Simple

### Additel 927 Hydraulic Pressure Test Pump

- Generate 85% vacuum to 10,000 psi (700 bar) pressure
- Portable, only 7 lb
- Minimal maintenance
- Increase and decrease pressure smoothly
- Hand-tight quick connectors

### **OVERVIEW**

The 927 Hydraulic Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 85% vacuum to 10,000 psi (700 bar). With the patented screw press technology, high pressures can be easily generated, as well as increased and decreased smoothly. With no check valve (non-returning valve), the 927 avoids the troublesome leakage issues that is usually experienced with most hand pumps and allows for minimal maintenance. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 927 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers in the field or laboratory.

### **FEATURES**

- Portable
  - Only 7 lb
- Durable and Minimal Maintenance

Patented screw press technology, without nonreturning valve inside that is usually used on troublesome hand pumps.

Easy-to-use

The high pressure can be generated easily, as well as increased and decreased smoothly.

### Extremely Low Leakage

Patented screw press technology, replaces troublesome check valves (non-returning valve) used in most hand pumps which practically eliminates leakage.

### Hand-tight Quick Connectors

Allows easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches.

### **ORDERING INFORMATION**

### Model Number

- **SPECIFICATIONS**
- Media: Oil or deionized water. (Oil is default media liquid. Pump with water as media to be ordered as 927W. Pump stability is best when used with oil. Performance may decrease when used with water as the media.)
- Reservoir capacity: 245 ml (15 in<sup>3</sup>)
- Generated Pressure Range 85% vacuum to 10,000 psi (700 bar) positive pressure.
- Material: Ram/adapters: SS Body: SS, aluminum Seals: Buna-N, PTFE, Copper Alloy
- Connection

Hand-tight connectors for both test gauge and reference gauge. 1/4NPT female, 1/2NPT female, 1/4BSP female,

1/2BSP female, or M20X1.5 female

- Dimensions: Height: 5.31" (135 mm)
   Base: 11.42" (290 mm) x 7.80" (198 mm).
- Weight: 7 lb (3.2 kg).
- Warranty: 1 year
- Piston volume

Low pressure piston: 19 ml (1.2  $\text{in}^3$ ) High pressure piston: 0.9 ml (0.05  $\text{in}^3$ )

### Additel 928 Hydraulic Pressure Test Pump

- Pressurize large-volume workload
- Generate to 15,000 psi (1,000 bar) pressure
- Portable only 8.6 lbs (3.9 kg)
- Increase and decrease pressure smoothly
- Hand-tight quick connectors

### **OVERVIEW**

Addite

The Additel 928 Hydraulic Pressure Test Pump is a hand operated pressure pump designed to generate pressure to 15,000 psi (1,000 bar). This pump incorporates a dual-piston system which is ideal for filling large volume workload with the hand pump and providing smooth increase and decrease of pressure with the fine adjustment. The 928 Test Pump incorporates an isolation valve which isolates the calibration volume from the check valve associated with the hand pump. Because the check valve can often be a source of leaks and maintenance, the isolation valve provides more stable measurements and reduces potential maintenance of the pump. Two hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The Additel 928 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers in the field or laboratory.

### **FEATURES**

- Hand pump to fill large volume systems
- Portable at 8.6 lbs (3.9 kg)
- Durable and minimal maintenance Isolation valve provides stable pressures while reducing maintenance on the hand pump check valve
- Easy to use

15,000 psi (1,000 bar) can be generated easily with the dual-piston system

Hand-tight quick connectors

Allows easy connection and disconnection to the test pump without the need for PTFE tape or wrenches

### Additel 936 Hydraulic High Pressure Calibration Pump

- Generate 85% vacuum to 15,000 psi (1,000 bar) pressure
- Minimal maintenance
- Increase and decrease pressure smoothly
- Three pressure ports
- Hand-tight guick connectors

### **OVERVIEW**

The 936 Hydraulic High Pressure Test Pump is a hand operated pressure pump designed to generate pressure from 85% vacuum to 15.000 psi (1.000 bar). With the patented screw press technology, high pressures can be easily generated, as well as increased and decreased smoothly. A specially designed shut-off valve makes the pressure as stable as possible during calibration. With no check valve (non-returning valve), the 936 avoids the troublesome leakage issues that is usually experienced with hand pumps and allows for minimal maintenance. Three hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 936 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers in the laboratory.

### **FEATURES**

- High Pressure
- Generates pressure up to 15,000 psi (1000 bar) Durable and Minimal Maintenance
- Patented screw press technology, without nonreturning valve inside that is usually used on troublesome hand pumps.
- Easv-to-use High pressures can be generated easily, as well as increased and decreased smoothly.

### Extremely Low Leakage

Patented screw press technology replaces troublesome check valves (non-returning valve) in most hand pumps which practically eliminates leakage.

Metrology Made Simple

### **OVERVIEW**

The 937 Hydraulic High Pressure Calibration Pump is a hand operated pressure pump designed for calibrating pressure measuring instruments with phosphoric acid ester fluid and Skydrol oil in the range from 85% vacuum to 15,000 psi (1000 bar). With the patented screw press technology, high pressures can be easily generated, increased and decreased smoothly. A specially designed shut-off valve makes the pressure as stable as possible during calibration. With no check valve (non-returning valve), the 937 avoids the troublesome leakage issues that is usually experienced with hand pumps and allows for minimal maintenance. Three hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 937 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers in the laboratory.

- Generate 85% vacuum to 15,000 psi (1,000 bar) pressure
- Oil-free pressure instruments
- Minimal maintenance
- Easy-to-use
- Three pressure ports
- Hand-tight guick connectors

### **OVERVIEW**

The 938 Hydraulic High Pressure Test Pump is specially designed for calibrating oil-free pressure measuring instruments in the range of 85% vacuum to 15,000 psi (1,000 bar). All parts used in the pump have been carefully cleaned to remove oil. The pump uses water as the media. With the patented screw press technology, high pressures can be easily generated, as well as increased and decreased smoothly. A specially designed shut-off valve makes the pressure as stable as possible during calibration. With no check valve (non-returning valve), the 938 avoids the troublesome leakage issues that is usually experienced with hand pumps and allows for minimal maintenance. Three hand-tight connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The 938 is an ideal comparison test pump for calibrating oil-free pressure measuring instruments such as test gauges, indicators or transducers in the laboratory.

## Additel 946A Hydraulic High Pressure Calibration Pump

- Pressurize large-volume workload
- Generate pressure to 15,000 psi (1,000 bar)
- Increase and decrease pressure smoothly
- Three pressure ports
- Hand-tight quick connectors

### **OVERVIEW**

The new Additel 946A Hydraulic Pressure Test Pump is a benchtop pressure pump designed to generate pressure to 15,000 psi (1,000 bar). This pump incorporates a dual-piston system which is ideal for filling large volume workload with the hand pump and providing smooth increase and decrease of pressure with the high pressure, fine adjust screw press. The 946A test pump incorporates an isolation valve which isolates the calibration volume from the check valve associated with the hand pump. Because the check valve can often be a source of leaks and maintenance, the isolation valve provides more stable measurements and reduces potential maintenance of the pump. Three hand-tight quick connectors installed on the pump allow easy connecting and disconnecting to the test pump without the need for PTFE tape or wrenches. The Additel 946A is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers.

### **FEATURES**

- Hand pump to fill large volume systems
- Durable and Minimal Maintenance Isolation valve provides stable pressures while reducing maintenance on the hand pump check valve.
- Easy-to-use

15,000 psi (1,000 bar) can be generated easily with the dual-piston system.

Three hand-tight quick connectors

Allows easy connection and disconnection to the test pump without the need for PTFE tape or wrenches.

### Additel 949 Hydraulic Ultra-high Pressure Test Pump

- Generate 85% vacuum to 40,000 psi (2,800 bar) pressure
- Minimal maintenance
- Easy-to-use
- Three pressure ports

### **OVERVIEW**

The 949 Hydraulic Ultra-high Pressure Test Pump is a hand operated pressure pump designed to generate pressure up to 40,000 psi (2800 bar). With the patented screw press technology, high pressures can be easily generated, increased and decreased smoothly. A specially designed shut-off valve makes the pressure as stable as possible during calibration. With no non-returning valve, the 949 avoids the troublesome leakage issues that is usually experienced with hand pumps and allows for minimal maintenance. The 949 is an ideal comparison test pump for calibrating ultra-high pressure measuring instruments such as test gauges, indicators or transducers in the laboratory.

### **FEATURES**

- Generate Ultra-high Pressure Generate pressure up to 40,000 psi (2,800 bar)
- Durable and Minimal Maintenance Patented screw press technology, without nonreturning valve inside that is usually used on troublesome hand pumps.
- Easy-to-use

With the patented screw press technology, high pressures can be generated easily, as well as increased and decreased smoothly.

### Extremely Low Leakage

Patented screw press technology replaces troublesome, check valves (non-returning valve) found in most hand pumps which practically eliminates leakage.

Low pressure piston: 30 ml  $(1.8 \text{ in}^3)$ High pressure piston: 2.5 ml  $(0.15 \text{ in}^3)$ 

### Accessories included

Diethylhexyl Sebacate: 1 bottle (250 ml) Manual: 1 pc

Carrying case (949-X-SET models only)

Optional Accessories

Model number	Description
9201	Diethylhexyl Sebacate, 1 liter (1 quart)
ADT104	Adapters and fittings, 1/4HP male to various male and female connectors (17 pcs). More information shown on page 72.
9908	Carrying case for 936, 937, 938 or 949.
ADT949-MK	Maintenance kit for Additel 949 pump

### Additel 959A Hydraulic Ultra-high Pressure Test Pump

- Pressurize large-volume workload
- Generate pressure to 40,000 psi (2,800 bar)
- Increase and decrease pressure smoothly
- Three pressure ports

### **OVERVIEW**

The new Additel 959A Hydraulic Pressure Test Pump is a benchtop pressure pump designed to generate pressure to 40,000 psi (2,800 bar). This pump incorporates a dual-piston system which is ideal for filling large volume workload with the hand pump and providing smooth increase and decrease of pressure with the high pressure, fine adjust screw press. The 959A test pump incorporates an isolation valve which isolates the calibration volume from the check valve associated with the hand pump. Because the check valve can often be a source of leaks and maintenance, the isolation valve provides more stable measurements and reduces potential maintenance of the pump. The Additel 959A is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers.

### **FEATURES**

- Generate Ultra-high Pressure Generate pressure up to 40,000 psi (2,800 bar)
- Hand pump to fill large volume systems
- Durable and Minimal Maintenance Isolation valve provides stable pressures while reducing maintenance on the hand pump check valve
- Easy-to-use

40,000 psi (2,800 bar) can be generated easily with the dual-piston system

### Additel 960 Hydraulic Ultra-high Pressure Test Pump

Addite Metrology Made Simple

- Pressurize large-volume workload
- Generate pressure to 60,000 psi (4,200 bar)
- Increase and decrease pressure smoothly
- Two pressure ports

### **OVERVIEW**

The new Additel 960 Hydraulic Pressure Test Pump is a benchtop pressure pump designed to generate pressure to 60,000 psi (4,200 bar). This pump incorporates a dual-piston system which is ideal for filling large volume workload with the hand pump and providing smooth increase and decrease of pressure with the high pressure, fine adjust screw press. The 960 test pump incorporates an isolation valve which isolates the calibration volume from the check valve associated with the hand pump. Because the check valve can often be a source of leaks and maintenance, the isolation valve provides more stable measurements and reduces potential maintenance of the pump. The Additel 960 is an ideal comparison test pump for calibrating pressure measuring instruments such as test gauges, indicators or transducers.

### **FEATURES**

- Generate Ultra-high Pressure Generate pressure up to 60,000 psi (4,200 bar)
- Hand pump to fill large volume systems
- Durable and Minimal Maintenance Isolation valve provides stable pressures while reducing maintenance on the hand pump check valve

# **Pressure Manifolds**

# Additel 12X Series

### Metrology Made Simple

The 12X series pressure manifolds are designed for expanding pressure test ports during pressure calibration. The Additel 121 pressure manifold is used for pneumatic pressure calibration up to 3,000 psi (200 bar), while the Additel 123 manifolds is compatible to hydraulic pressure applications up to 15,000 psi (1,000 bar). A filter is built-in with the 121 pneumatic pressure manifold to prevent contamination introduced by devices under test. There are four hand-tight quick connectors pre-installed on each manifold. Additel 12X series pressure manifolds allow you to connect without the use of wrenches or Teflon tape which increases your productivity when using calibration pumps, pressure controllers, dead weight testers, or piston gauges.

121 series Pressure Manifolds Pneumatic, -15 psi to 3,000 psi (-1 to 200 bar)

Model	Description
ADT121-N	1/4NPT male hose to four 1/4NPT female hand-tight quick connectors
ADT121-N2	1/2NPT male hose to four 1/2NPT female hand-tight quick connectors
ADT121-M	M20×1.5 male hose to four M20×1.5 female hand-tight quick connectors
ADT121-B	1/4BSP male hose to four 1/4BSP female hand-tight quick connectors
ADT121-B2	1/2BSP male hose to four 1/2BSP female hand-tight quick connectors

123 series Pressure Manifolds Hydraulic, -15 to 15,000 psi (-1 to 1,000 bar)

Model	Description
ADT123-N	1/4NPT male hose to four 1/4NPT female hand-tight quick connectors
ADT123-N2	1/2NPT male hose to four 1/2NPT female hand-tight quick connectors
ADT123-M	M20×1.5 male hose to four M20×1.5 female hand-tight quick connectors
ADT123-B	1/4BSP male hose to four 1/4BSP female hand-tight quick connectors
ADT123-B2	1/2BSP male hose to four 1/2BSP female hand-tight quick connectors

### 127 series Pressure Manifolds

Pneumatic, -15 to 3,500 psi (-1 to 250 bar)

Model	Description
ADT127-N	1/4NPT male hose to three 1/4NPT female hand-tight quick connectors
ADT127-N2	1/2NPT male hose to three 1/2NPT female hand-tight quick connectors
ADT127-M	M20×1.5 male hose to three M20×1.5 female hand-tight quick connectors
ADT127-B	1/4BSP male hose to three 1/4BSP female hand-tight quick connectors
ADT127-B2	1/2BSP male hose to three 1/2BSP female hand-tight quick connectors

Note: A test hose is included with every Additel 12X pressure manifold.

### ADT100-FLT-600

600 psi (40 bar) Pneumatic Filter Specifications

Pressure range	-15 to 600 psi (-1.0 to 40 bar)
Filtering resolution	0.04 mm
Operation temperature	-10°C to 50°C
Safety pressure	<720 psi (50 bar)
Size	1.18 dia x 5 in (30 dia x 127 mm) (size will vary based on adapters)
Outlet/Inlet port	See ordering information
Storage temperature	-20°C to 70°C
Material	304 SS / Polycarbonate

# ADT100-FLT-10K

### 10,000 psi (700 bar) Hydraulic Filter Specifications

Pressure range	-15 to 10,000 psi (-1.0 to 700 bar)
Filtering resolution	0.07 mm
Operation temperature	-10°C to 50°C
Safety pressure	<12,000 psi (827 bar)
Size	0.87 x 0.98 x 4 in (22 x 25 x 100 mm) (size will vary based on adapters)
Outlet/Inlet port	Comes with removable male and removable female adapter
Storage temperature	-20°C to 70°C
Material	304 SS

Additel 104

# **Additel Hose Test Kits**

### Low Pressure Hose Test Kits

The Additel 100 series Low Pressure Hose Test Kits are designed to extend your pressure calibrations to a convenient location to adapt from one pressure connection to another. Each test kit has 5 feet of flexible hose rated to 1,000 psi (70 bar) which connects a male NPT, BSP, or Metric connector to a variety of female quick connectors. Additel's specially designed quick connectors allow for hand-tight connection without the need for wrenches or Teflon tape. The Additel 100 series Hose Test Kits are a great accessory to any pressure pump or controller.

SPECIFICATIONS

### **ORDERING INFORMATION**

- Max pressure: 1,000 psi (70 bar)
- Hose length: 5 ft (1.5 m)
- Connection: Each hose test kit is fitted with a female quick connect adapter on one end and a corresponding male adapter on the other. (e.g. ADT100-HTK-1K-N has a 1/4 NPT female quick connect on one end and a 1/4 NPT male adapter on the other).

Note: Custom lengths available by request.

Don't need the entire kit? Order individual adapters with the above part numbers.

•

# **Additel Hose Test Kits**

# Additel 100-HTK Series

- Hand-tight quick connectors
- Conveniently extend pressure calibrations
- **5** ft hose length

### **OVERVIEW**

The Additel 100 series High Pressure Hose Test Kits are designed to extend your pressure calibrations to a convenient location to adapt from one pressure connection to another. Each test kit has 5 feet of flexible hose rated to 8,000 psi (550 bar) or 15,000 psi (1,000 bar) which connects a male NPT, BSP, or Metric connector to a variety of female quick connectors. Additel's specially designed quick connectors allow for hand-tight connection without the need for wrenches or Teflon tape. The Additel 100 series Hose Test Kits are a great accessory to any pressure pump or controller.

### ADT100-HTK-8K

- Maximum pressure: 8,000 psi (550 bar)
- Hose length: 5 ft (1.5 m)
- Burst pressure: 15,900 psi
- Internal hose material: Polyamide

### ADT100-HTK-15K

- Maximum pressure: 15,000 psi (1,000 bar)
- Hose length: 5 ft (1.5 m)
- Burst pressure: 43,500 psi
- Internal hose material: Polyoxymethylene

# Additel 286 Multifunction Reference Thermometer Readout

- Measure and calibrate SPRTs, RTDs, thermistors and thermocouples
- 1 PPM resistance ratio accuracy (channel 1)
- 8 1/2-digit DC multimeter
- Measure up to 82 channels
- Sample rates up to 10 channels per second
- Bluetooth, WIFI, USB& Ethernet (RJ-45) capable
- Auto temperature control of Additel and other manufacture's heat sources
- Built-in automatic temperature control, data collection, and coefficient generation
- Support for creating custom control of heat sources with RS-232
- Auto zero power feature (self heating compensation)
- 10.1 in. touch screen display
- Supports fully automated temperature calibrations with data collection and report generation (no software required)

### **OVERVIEW**

The Additel 286 Multifunction Reference Thermometer Readout is an industry first! We have combined the capabilities of a high-end reference thermometer with a highly capable data acquisition system and 8.5 digit multimeter. The ADT286 is capable of scanning and recording up to 82 channels at 10 channels per second. Users can easily configure the ADT286 to perform field calibrations and uniformity studies as well as use the unit in the lab as a precision thermometer and 8.5 digit multimeter. Get more for less with this newest game changer from Addite!

•

### ADT286 Multifunction Reference Thermometer Readout Scanner Modules

Metrology Made Simple

If you're in need of a precision reference thermometer for your laboratory, then look no further than the Additel 286. The base unit comes with two precision readout channels that can be used to measure your SPRT. Need to calibrate RTDs, PRTs, thermistors or thermocouples? Add a scanner module and you now have the ability to measure 10 RTDs, PRTs, or thermistors and 20 thermocouples. Expand up to 82 channels with our unique easy to use scanner modules. Each 20 channel module is outfitted with our proprietary universal terminals with an industries best cold junction capability second to none. Utilize the module docked atop the ADT286, or connect remotely with cables to suit nearly any unique setup/configuration. Additel also has a process module specifically designed to measure process instrumentation like transmitters and switches. This scanner will also supply loop power for the transmitters.

Designed to make your job easier, the ADT286 has a large sensor library supporting 15 TC types, both standard and special limits, 18 different thermal resistors, CVD, ITS-90, and a large variety of standard curves for RTDs and thermistors. The ADT286 is loaded with special applications such as probe calibration, SPRT calibration, chamber mapping and more. And we continue to add applications on a regular basis!

### Automatic Temperature Control and Probe Calibration

The Additel 286 Multifunction Reference Thermometer Readout has preinstalled drivers to control Additel and other manufacturer's heat sources. Simply connect to one or more heat sources via a communication cable, Ethernet or wireless and now it will automatically control to the set point and desired stability. If your heat source is not on the list, you can easily add the driver yourself so you can run automated calibrations with any heat source.

Now combine the heat source control feature with our probe calibration application and you have a very powerful automatic calibration solution. The probe calibration app allows you to automatically setup and run calibration routines with multiple set points and multiple heat sources, collect data, and develop calibration coefficients — all with one device and without the need of software! Simply place a batch of sensors of any mix and type into your heat source, connect it to the ADT286, run the probe calibration app and come back to a completed test. All that is left to do is generate and export all the calibration data. There's no need to work with complicated software for communication, set up or coefficient generation. There is no reason to have a calibration technician manually monitor the process and record the data. This Multifunction Reference Thermometer Readout will do all the work for you.

### **ADT280-RS Resistance Standards**

Available in 25 & 100 Ohm values, users can enjoy improved resistance ratio performance by easily plugging one of our reference resisters into channel 2 on the new ADT286. Perfect for calibrating your SPRT's and high end PRT's. Each ADT280-RS resistor comes with adaptive binding posts to help facilitate utilization of the resistor in other applications as needed.

### **SPECIFICATIONS**

### **General Specifications**

Specification	Description
Voltage	100V Setting 90V to 110V 120V Setting 108V to 132V 220V Setting 198V to 242V 240V Setting 216V to 264V
Frequency	47Hz to 440Hz.Automatically sensed at power-on
Power Consumption	40VA peak (30Watt average)
Temperature	Operating : 0°C to 50°C Full accuracy :18°C to 28°C Storage : -20°C to 70°C
Warm-up	60 mins for full uncertainty specifications
Relative Humidity (non- condensing)	Operating : 0°C to 28°C < 90% 28°C to 40°C < 75% 40°C to 50°C < 50% Storage : -20°C to 70°C < 95%
Altitude	Operating : 2000 m Storage : 12000 m
Vibration and Shock	Complies with MIL-28800F Class 3
Input Protection	50V all functions, ranges and terminals
Communication	USB-A,USB-B,RJ45,WiFi,Bluetooth
Memory	10G - All data stored with time stamps
Localization	English , Chinese
Display	10.1 in (256 mm) TFT color display
Size (H x W x D)	9.8 in (250 mm) x 16.5 in (420 mm) x 7.9 in (200 mm)
Weight	18.5 lb ( 8.39 kg)
Other Conformities	CE
Warranty	1 Year

### **Measurement Specifications**

Specification Conditions: 60 mins Warm-Up Time / Environment Temperature (18 - 28) °C.

The following specifications apply for front panel, after at least 60 minutes warm-up. 24-hour specifications are relative to calibration standards and assume a controlled electromagnetic environment per EN 61326.

### **Resistance Ratio Accuracy (Rx/Rs) using External Rs**

Range	Reference Resistance	Ratio (Rx/Rs)	1 Year (23 ± 5) °C ppm of Reading
		2.00-4.00	1.5
	25 Ω	1.10-2.00	0.85
<b>100</b> Ω		0.90-1.10	0.6
		0.50-0.90	1.5
		0.25-0.50	2.5
		2.00-4.00	2
		1.10-2.00	0.81
400 Ω	100 Ω	0.90-1.10	0.26
		0.50-0.90	0.95
		0.25-0.50	1.2

### Metrology Made Simple

### SPRT/PRT Measurement Accuracy using External Rs

SPRT/PRT Type	External Reference Resistance	Temperature (°C)	Resistance Ratio (Rx/Rs)	1 Year(23 ± 5) °C ppm of reading	Equivalent to Temperature (mK)
		-189.3442	0.22	2.5	0.13
		-38.8344	0.84	1.5	0.32
		0.01	1	0.6	0.15
PT25	25 Ω	231.928	1.89	0.85	0.44
		419.527	2.57	1.5	1.11
		660.323	3.37	1.5	1.58
		-189.3442	0.22	1.2	0.07
		-38.8344	0.84	0.95	0.20
PT100	100 Ω	0.01	1	0.26	0.07
FIIUU	100 12	231.928	1.89	0.81	0.42
		419.527	2.57	2	1.47
		660.323	3.37	2	2.11

[1] The PT25 indicator is based on a nominal resistance of 25  $\Omega$  for Rx.

[2] The PT100 indicator is based on a nominal resistance of 100  $\Omega$  for Rx.

[3] The uncertainty of external Rs is not included. The user may choose the ADT280-RS-25/100 standard resistor as external Rs, which has an accuracy of 5 ppm at (23±2) °C.

### **Resistance Accuracy using Internal Rs**

Measurement Range	Scanning Speed	Resolution	<b>24 Hour</b> ( <b>23 ±</b> 1) °C	<i>90 Days</i> (23 ± 5) °C	<i>1 year</i> (23 ± 5) °C	Excitation Current	Temperature Coefficient
	Slow Speed	0.01 mΩ	3 ppm or 0.2 m $\Omega$	12 ppm or 0.35 m $\Omega$	15 ppm or 0.35 m $\Omega$		
<b>( 0~100 )</b> Ω	Medium Speed	0.01 mΩ	3 ppm or 0.55 m $\Omega$	12 ppm or 0.7 m $\Omega$	15 ppm or 0.7 m $\Omega$	±1 mA/±12 V	3 ppm + 0.01 mΩ
	Fast Speed	0.1 mΩ	3.6 ppm or 1.7 m $\Omega$	12.6 ppm or 1.85 m $\Omega$	15.6 ppm or 1.85 m $\Omega$		
	Slow Speed	0.01 mΩ	3 ppm or 0.3 m $\Omega$	12 ppm or 0.4 m $\Omega$	15 ppm or 0.4 m $\Omega$		3 ppm + 0.02 mΩ
<b>( 0~400 )</b> Ω	Medium Speed	0.01 mΩ	3 ppm or 0.7 m $\Omega$	12 ppm or 0.8 m $\Omega$	15 ppm or 0.8 m $\Omega$	±1 mA/±12 V	
	Fast Speed	0.1 mΩ	$3.6 \text{ ppm or } 1.9 \text{ m}\Omega$	12.6 ppm or 2 m $\Omega$	15.6 ppm or 2 m $\Omega$		
	Slow Speed	0.1 mΩ	3 ppm or 4 m $\Omega$	12 ppm or 5 m $\Omega$	15 ppm or 5 m $\Omega$		
<b>( 0~4000 )</b> Ω	Medium Speed	0.1 mΩ	3 ppm or 8 m $\Omega$	12 ppm or 9 m $\Omega$	15 ppm or 9 m $\Omega$	±0.1 mA/±12 V	3 ppm + 0.2 m $\Omega$
	Fast Speed	1 mΩ	3.6 ppm or 20 m $\Omega$	12.6 ppm or 21 m $\Omega$	15.6 ppm or 21 m $\Omega$		

[1] Accuracy Index:  $\pm$  (ppm of reading or xxm $\Omega$  , whichever is greater).

[2] Temperature coefficient index: exceeds (18-28) °C range, increase per degree (ppm reading +xxmΩ).

[3] Specifications are for 4-wire function. For 3-wire, add 0.005 Ω for internal resistance mismatch. For 2-wire, add 0.005 Ω for internal resistance

[4] Automatic current reversal.

### **PRT Measurement Accuracy using Internal Rs**

Scanning Speed	Temperature	24 Hour /°C (23 ±1) °C	<i>90 Days</i> /°C (23 ± 5) °C	<i>1 year /</i> °C (23 ± 5)  °C	Temperature Coefficient °C/°C

	600 °C	0.0059	0.0152	0.0152	0.0036

[1] The indicator is based on the electrical accuracy of the 4-wire PT100 PRT and does not include the accuracy of the PRT itself. [2] Temperature maximum Resolution is 0.0001 °C.

### Thermocouple Voltage Accuracy

### Metrology Made Simple

Test Range	Scanning Speed	Resolution	24 hours (23 ±1) °C	<i>90 days</i> (23 ±5) °C	<i>1 year</i> (23 ±5) °C	Input Resistance	Temperature Coefficient
	Slow Speed	0.01 µV	5 ppm + 2 ppm	10 ppm + 4 ppm	14 ppm + 4 ppm		2 1 ppm + 0.1 μV
(-100-100) mV	Medium Speed	0.01 µV	5 ppm + 6 ppm	10 ppm + 8 ppm	14 ppm + 8 ppm	10 M $\Omega$ or >10 G $\Omega$	
	Fast Speed	0.1 µV	5 ppm + 22 ppm	10 ppm + 24 ppm	14 ppm + 24 ppm		

Accuracy Index: ± (ppm of reading + ppm of FS).
 Temperature coefficient index: Exceed the range of (18-28) °C, increase (ppm of reading + xxµV)/ °C.

### **Thermocouple Cold Junction Accuracy**

CJC Accuracy	±0.1 °C , 1 year, 23 °C ± 5°C
Environmental Coefficient	Beyond (18 ~ 28) °C, add 0.02 °C / °C
Other	Each signal scanner has 10 cold Junction temperature sensors

### **Thermocouple Temperature Accuracy**

# Additel 878 Reference Dry Well Calibrators

- Three models ranging from -40°C to 700°C
- Reference level performance in accuracy, stability and uniformity
- Quick to temperature
- Two-channel readout measures RTDs and TCs, and provides task documentation
- Full HART communicator
- Optional external temperature control
- Wi-Fi and Bluetooth capable
- Color touch screen display
- Quick-Push connectors (PC Option)
- Set point control by reference
- Self-calibration feature
- Optional TPW kit for built-in automatic realization (ADT878-160 only)
- Built-in automatic annealing feature (ADT878-700 only)

#### **OVERVIEW**

We are taking temperature calibration to the next level with the Additel 878 Reference Dry Well Calibrators. If you are looking for the best dry well on the market, then look no further! Additel's commitment to continuous improvement, quality and time saving features are on full display in the ADT878 series. With three models to choose from, ranging from -40 to 700°C, you will find the perfect fit for your calibration needs. The Process Calibrator option adds an external reference input, a two-channel readout for UUT's and a full complement of capabilities to help with everything from measuring temperature sensors, to calibrating thermocouples, self-calibrating the Reference Well and configuring HART transmitters. Each unit comes standard with a large touchscreen display, dual-zone control and Additel's commitment to the best customer service in the industry. We are certain that you will be blown away by the outstanding performance of these game-changing Reference Dry Wells!

### **Process Calibrator Option**

Metrology Made Simple

Each model can be purchased with our Process Calibrator (PC) option. This option combines the many features found in a fully functional HART documenting process calibrator with the reference grade dry well. This option includes the ability to measure a reference PRT, with virtually any connection type, and two device under test channels which can measure, mA, voltage, switch, RTD or thermocouple. In addition to these measurement functions, this calibrator has full documenting capability of creating tasks, saving as found and as left results, as well as communication with HART-smart transmitters. The process calibrator option also has an on board full HART communicator which allows users to read, configure and calibrate HART transmitters. The snap shot feature allows you to capture all information displayed on the screen with the push of a button. This optional add-on allows for data logging of all channels on an auto step function. By utilizing the reference PRT, you can select to control to the dry well set point using the internal sensor or the external reference PRT.

### Self-Calibration

We believe using an external reference probe as your standard is the best way to perform your temperature calibration. But we also recognize this method is not always necessary or convenient and depending on the application, using the internal control sensor would be preferred. Traditionally, the internal control sensor has a wide accuracy which can largely be contributed to its long-term drift. We've built-in a self-calibration feature allowing you to run an automated calibration of the internal control sensor using your external reference. With literally a few selections the calibration will run automatically giving you a fresh, traceable calibration of the control sensor which will improve its accuracy as you will not have to account for its long term drift when used as the reference.

### **Automation Features**

Traditionally, dry wells were simply a stable heat source. To enhance the usability of our Reference Dry Wells, we've added automation features enabling you to utilize these amazing devices as a highly stable heat source, triple point of water maintenance apparatus, and annealing furnace.

Combined with the ADT878-TPW-KIT, the ADT878-160 Reference Dry Well can be used to automatically realize and maintain a triple point of water cell. Traditional methods take time and practice to realize the triple point of water. Additel has now simplified this process with an automatic TPW realization feature. Simply insert the cell and PRT into the Reference Dry Well and run the procedure. The automation in the firmware will alert when the cell is super cooled. Remove the cell and give it a shake and now you can maintain the triple point in the reference well. This is very useful to check the drift of your PRT. For more information, please see our ADT878-TPW-KIT data sheet.

When you purchase our 700°C Reference Dry Well, you will find our automatic annealing feature used to anneal PRTs. We have preconfigured annealing procedures that set the temperature annealing time and cool down rate. This feature, also lets you create your own annealing procedures.

# ADT878-TPW-KIT Triple Point of Water Realization Kit

- One touch TPW cell realization
- Extremely affordable intrinsic standard
- Self-calibration feature
- Automatically update reference probe TPW values
- Easily maintain temperature working standards
- Fully self-contained

### **OVERVIEW**

The Additel 878 TPW Kit provides everything you need to utilize our model ADT878-160 Reference Dry Well as an intrinsic standard. The triple point value (0.01°C) is key to ITS-90 temperature probe calibration work. Traditional methods take time and practice to realize the triple point of water. Additel has now simplified this process with an automatic TPW realization feature. Simply insert the cell and PRT into the Reference Dry Well and run the preprogrammed procedure. The automation in the firmware will alert when the cell is super cooled. Remove the cell and give it a shake and now you can maintain the triple point in the reference well. With the help of this easy to use kit, users can quickly and easily realize and maintain our custom fit TPW cell, then record/update those ever critical TPW values for all your PRTs.

### **Accuracy Verification Loop**

The triple point of water (TPW) is a critical intrinsic standard and ITS-90 reference point that every owner of a reference PRT or SPRT should have. Using the TPW to check reference temperature probes is the most convenient and affordable way to ensure confidence in your measurements. By regularly checking the drift of your temperature sensor, you can know with certainty if your sensor is in tolerance or not. The International Temperature Scale of 1990 (ITS-90) supports the TPW to be a reliable standard to check your reference PRT. By using the ADT878-160 Reference Dry Well, you can maintain and realize the TPW cell, which in turn can verify your reference PRT. This helps to bring everything full circle, the reference PRT can be used in the self-calibration mode to validate the display accuracy of the ADT878.

**Accuracy Verification Loop** 

### **SPECIFICATIONS**

Specification	Display	
Uncertainty	<0.0005°C <sup>[1]</sup>	
Immersion depth/ID	115 mm X 8 mm	
External Dimensions	160 mm X 25 mm	
Cell material	Borosilicate Glass	
Realization time	20 mins	
Estimated working time	2 hours	
Recommended thermal Fluid	Ethanol	
Warranty	1 year	

[1] Specification relates to the overall uncertainty when using the shake method of realizing the cell and maintaining it in the ADT878-160. Call for more info.

# Additel 875 Series Dry Well Calibrators

- Three models ranging from -40°C to 660°C
- Portable, rugged, and quick to temperature
- Metrology-level performance in stability, uniformity, accuracy and loading effect
- Dual-zone control
- Full HART field communicator
- Process calibrator option provides a multi-channel readout for a reference thermometer, RTDs and TCs, task documentation, and HART communication
- Color touch screen display
- Choose your own range option
- Set point control by reference
- Self-calibration feature

### **OVERVIEW**

If you are serious about portable temperature calibration tools, then you know a good dry well calibrator is more than just a stable heat source. The Additel 875 Series Dry Well Calibrators combine excellent performance in stability, radial and axial uniformity, and loading with speed, ruggedness and portability. But we don't stop there! The Process Calibrator option adds the capabilities of a three-channel thermometer readout and a documenting process calibrator. We've also incorporated a unique option to select your own temperature range within the range of the model selected. We're calling this the CYOR option or Choose Your Own Range option. When you purchase the CYOR option, you pick the upper and lower temperature range needed and we calibrate and optimize the dry well's performance over your selected range. Each unit has a color touch screen display, dual-zone control, and much more. You are just going to love these new dry wells!

Metrology Made Simple

### **Process Calibrator Option**

Each model offer has a Process Calibrator (PC) option. This process calibrator option combines the many features found in a fully functional HART documenting process calibrator with the temperature dry well. This option includes the ability to measure a reference PRT and two devices under test channels which can measure, mA, voltage, switch, RTD or thermocouple. In addition to these measurement functions, this calibrator has full documenting capability of creating tasks, saving as found and as left results, as well as reading, configuring and calibrating HART capable transmitters. The snap shot feature allows you to capture all information displayed on the screen with the push of a button. This optional add-on allows for data logging of all channels on an auto step function and a ramp function. By utilizing the reference PRT, you can select to control to the dry well set point using the internal sensor or the external reference PRT.

### **Self-Calibration**

We believe using an external reference probe as your standard is the best way to perform your temperature calibration. But we also recognize this method is not always necessary or convenient and depending on the application, using the internal control sensor would be preferred. Traditionally, the internal control sensor has a wide accuracy which can largely be contributed to its long-term drift. We've built-in a self-calibration feature allowing you to run an automated calibration of the internal control sensor using your external reference. With literally a few selections the calibration will run automatically giving you a fresh, traceable calibration of the control sensor which will improve its accuracy as you will not have to account for its long term drift when used as the reference.

# **Short Probe Temperature Calibration Kit**

- Reduce calibration uncertainties
- Avoid messy fluid baths
- Reduce calibration time
- Improved accuracy with custom control probe (included)
- Metric or Imperial kits available

Addite

### **OVERVIEW**

The Additel 110 series short probe calibration kit is designed to help users of our ADT875-155 or ADT878-160 to calibrate temperature probes and transmitters with short probe lengths. This all-inclusive kit comes with everything needed to perform more accurate and reliable calibration for those challenging short probes. Choose between our metric or imperial kit to fit your needs. Each kit comes complete with (3) standard sized inserts and (1) blank insert, which can be modified by the end user to accommodate custom sized UUT's if needed. The small reference probe is included which fits snuggly into the reference port of the specially machined inserts. Also, we include a small set of tools and supplies to help improve results by removing a couple of small parts on the top of the ADT875 or ADT878 calibrator. For more information, please watch our instructional short probe video found at www.additel.com

Additel Cataloo
# ADT875 and ADT878 Thermocouple Calibration Furnaces

- Temperature control from 100°C to 1210°C
- Two models to choose from: Reference (ADT878) and Standard (ADT875)
- Display Accuracy of ±1.5°C (ADT878)
- Stability of ±0.1°C
- 4 on-board measurement channels (PC option)
- Process calibrator option provides a multi-channel readout for TCs, switches and transmitters, including task documentation and HART communication
- Portable, rugged and quick to temperature
- Self-calibration feature (PC option)
- Multi-zone temperature control
- Internal and external sensor control (PC option)
- Metallic interchangeable inserts
- Wi-Fi and Bluetooth capable
- Color touch screen display
- ISO 17025-accredited calibration w/data included
- Patent pending technology

# **OVERVIEW**

We understand the many challenges associated with thermocouple calibration work. That is precisely why we decided to introduce the ADT875-1210 and ADT878-1210 Thermocouple Calibration Furnaces.

With an unmatched stability, uniformity and an optional on-board process calibrator, calibrating thermocouples has never been easier. With two separate units to choose from, the ADT875-1210 and ADT878-1210 furnaces include a patented multi-zone temperature control which provides a never before seen, highly stable and uniform heat source to ensure you get the best possible results from a modest investment. With metallic interchangeable inserts, users have the flexibility needed to service a wide variety of UUT's and the durability they have come to expect from Additel. The ADT875-1210 and ADT878-1210 can be purchased with or without our on-board process calibration electronics to provide flexibility for customers who are needing the best 1200°C heat source on the market.

If thermocouple calibration and/or verification work is part of your workload, you don't want to miss out on this opportunity to save valuable time and money with these best in class furnaces from Additel.

#### **Temperature Control**

The Additel ADT875 & ADT878 Thermocouple Calibration Furnaces have been designed with a unique and innovative way of controlling temperature and temperature gradients. We like to call it "Advanced Adaptive Control". This exciting new design feature incorporates our patent pending wind tunnel control technology with Additel's impressive 3-zone temperature control to provide the very best uniformity and stability possible.

Each ADT875 & ADT878 is tested and calibrated in Additel's accredited laboratory (Brea, CA) to ensure that each unit is ready to go when the customer opens the package. The included accredited calibration certificate provides data relating to accuracy, stability and uniformity to help provide even more confidence in the testing and calibration of each and every ADT875 & ADT878 Thermocouple Calibration Furnace.

Specification	875-1210	878-1210 <sup>[1]</sup>

#### **Process Electronics**

Both the ADT875 & ADT878 can be ordered with Additel's Process Calibrator (PC) option. The Process Calibrator Option combines the many features found in a thermocouple readout device and process calibrator with the ADT875 & ADT878 Calibration Furnaces.

This unique option includes Additel's patented Quick-Push connectors which accommodate virtually all TC connection types. The process option also includes the ability to measure a reference grade thermocouple and up to (4) under test channels. Channels 1 and 2 can measure mA, voltage, perform switch testing and source 24V DC. In addition to these measurement functions, the process option provides full documenting capability of creating tasks, saving "as found" and "as left" results and HART communications for simplified transmitter work. The snapshot feature allows users to capture all information displayed on the screen with a touch of the screen. This optional add-on allows for data logging of all channels using our auto step and a ramp functions. By utilizing the external reference option users can select to control to the furnace set point using an external control probe, which helps to reduce uncertainties. The external control probe feature also facilitates the handy self-calibration feature!

[4] Built-in 250 $\!\Omega$  resistor for HART communications.

# Additel 209 and 210 Series Loop Calibrator

- Accuracy to 0.01% of reading
- Small and rugged handheld design
- Measure, source, or simulate loop current
- Measure DC volts
- Simultaneously mA and % span display
- Switch functionality
- Selectable ramp and step functions
- Easy to read display and user interface
- HART 250Ω resistor in series with 24V loop

#### **OVERVIEW**

The new Additel 209 and 210 loop calibrator series combine ease of use and functionality, making them the ideal tools to troubleshoot your process loop. The ADT209 has an accuracy of 0.03% of reading whereas the ADT210 holds an accuracy of 0.01% of reading. If you want to source, simulate or simply measure, the Additel Loop calibrator series will fit your need. The ADT209 and ADT210 allow for measurement of current, voltage and a switch. You can also simulate or source mA or a process transmitter. With a push of a button, you can switch to zero and span values, auto ramp, and auto step throughout the range. Each loop calibrator has a large, easy to read screen which simultaneously displays the measurement with the % of span.

# **ELECTRICAL MEASURE SPECIFICATIONS**

# Additel 220 Multifunction Loop Calibrator

- Measure and source loop current, mV, and V
- Measure and source simultaneously
- Loop Continuity Test capability
- 24V loop supply with simultaneous current measurement
- 3 year warranty

Metrology Made Simple

# **OVERVIEW**

The 220 is a highly integrated loop calibrator featuring several patented technologies. The calibrator is an ultra-compact, rugged, and best of all, easy to use hand-held device that will source, simulate and measure loop current, mV/V, Loop Continuity Test, and also perform switch testing. Its smart phone-like menu and interface makes it simple and easy to use. The 220 is ideal for calibrating, maintaining, and troubleshooting various loop devices in the field.

# **FEATURES**

Measuring and sourcing loop current, mV and V

Measures loop current up to 30 mA with 0.1  $\mu A$  resolution Measures voltage signals up to 60 V, and mV signals up to 300 mV

Sources/sink loop current, mV and V

24 V loop power supply with simultaneous current measurement

Simultaneous dual reading capability Capture switch

Data statistics and analysis

Display max, min, peak-to-peak, average, and percentage simultaneously

Convert data to a real physical value through re-scaling function

On-demand logging

High-capacity storage with up to twenty thousand records On-line view, index, analyze, auto-curve, and list the data

- Various sources and converting mode Support linear, flow, valve, and 25% stepping source Auto-source of ramping and stepping Gauge span examination
- "As Cal" on-site calibration tools
  Four on-site calibration tools preset: loop indicator,

sensor/transmitter, signal isolator/converter, and limit alarm/switch

- Support 2W transmitter connection
- Multi lingual interface English,Simplified Chinese
- Convenient tools
  - Calculator, thermocouple converter, HOLD screen lock Display rate
  - 4 readings/second

Easy to use

Smartphone-like menu and interface make the operation simpler and easier Ultra-compact, size  $3.9" \times 7.6" \times 2.0"$  (100 mm x 192 mm x 52 mm), and weight 1.6 lb (0.7 kg) One hand operation

- Snapshot
- Save and manage up to 100 snapshots
- Display

3.5 inch TFT color screen

4, 5, or 6 digits adjustable display

Rugged

Rugged design for harsh environments.

Passed a 1-meter drop test

Three years warranty for the 220, and one year for the battery pack

Misuse protection and Electrical isolation

Up to 30 V voltage on any two sockets and up to 1A current on current sockets will not damage the calibrator. The calibrator will return to normal condition as soon as the voltage or current is removed. Measuring, sourcing and loop power circuits are electrically isolated each other.

Rechargeable battery

Rechargeable Li-ion battery for 15 hours uninterrupted use.

Battery life will be reduced when 24 V is applied. The rechargeable battery is replaceable.

## ISO 17025 Accredited Calibration with data

- Firmware upgrade
- Support firmware upgrade when available
- Warranty: 3 years

# Additel 220 Multifunction Loop Calibrator

# **APPLICATIONS**

The 220 loop calibrator is a process tool for measuring, sourcing and simulating mA, mV and V, captures switch values and provides 24 V loop power. It is a high performance solution for calibration, repair and maintenance of various loops devices, Loop Continuity Test, and switch capture.

## **SPECIFICATIONS**

Metrology Made Simple

# Additel 221A, 222A & 223A Multifunction Documenting Process Calibrators

- Sourcing, simulating and measuring pressure, temperature and electrical signals
- Smartphone-like menu and interface for simple operation
- HART Communication capability (223A)
- The internal cold junction compensation sensor can be recalibrated at the ice point
- Ultra-compact, 3.9" x 7.6" x 2.0", and 1.6 lb (0.7 kg)

Metrology Made Simple

#### **OVERVIEW**

This series of highly integrated multifunction calibrators feature several patented technologies. These are an ultracompact, rugged, and easy to use hand-held device for sourcing, simulating and measuring pressure, temperature, and electrical signals. Their smartphone-like menu and interface make the operation simple. Automation and documentation capabilities make the these calibrators a turnkey solution.

#### Additel 221A

The Additel 221A is very unique to the multifunction temperature calibrator market. Not only does it provide you with the ability to source, simulate and measure temperature and electrical functions but it also incorporates full documenting capability and many other solutions other competitors do not provide. As a standalone device, you can create tasks, run tests and store the results. With the use of Additel/Land Software or Additel/Cal software, all saved tasks and data can be downloaded and managed. With it's unique internal cold junction compensation sensor, cold junction compensation is very simple and easy.

#### Additel 222A

The Additel 222A Multifunction Process Calibrator takes all the functionality of the 221A and adds the ability to measure and source pressure using the ADT160A Intelligent Pressure Modules. With calibration characteristics programmed directly into the ADT160A pressure modules, you can simply connect them to the 222A and it will automatically recognize and display the module as the source or measure pressure. For ultimate convenience, the 222A allows for modules to be "hot swapped" with a simple connection at the top of the module.

#### Additel 223A

The 223A has all the capability of the 221A and 222A and HART Communication in one small, easy-to-use package. The 223A has a full HART library that allows for the reading of HART-smart devices and also the capability to write to devices. Combined with full task automation and documentation, the 223A is an ideal tool to accomplish many of your important calibration tasks.

## **FEATURES**

 Sourcing, simulating and measuring temperature and electrical signals

Sources and measures mV, mA, ohms, RTDs, thermocouples, frequency, and pulses

Simulates and measures 13 thermocouples and 11 RTDs to calibrate transmitters

Measures and sources pressure using Additel 160A series Intelligent Digital Pressure Modules from -15 psi to 10,000 psi (-1 bar to 700 bar)

24V loop power supply

Simultaneous dual reading capability

- Automatic switch test
- Supports square root transmitter
- Pulse frequency output for the calibration of flow totalizer **Easy to use**

Smartphone-like menu and interface make the operation simpler and easier

Ultra-compact, size 3.9" x 7.6" x 2.0" (100mm x 192mm x 52mm), and weight 1.6 lb (0.7 kg)

Loorne barded Apadetter.com or call today (1)714-998-6899

Calibrated cold junction compensation (Patented)
 Cold junction equalizing block in the calibrator
 A calibrated PRT element with flexible leads is installed

in the equalizing block for thermocouple cold junction compensation

This PRT element can be pulled out from the calibrator and re-calibrated and corrected at the ice point

Documenting and automated procedure capability Manage the information of the device under test. Set up automated calibration procedures, and 223A performs the test, calculates the errors, displays and/ or stores the results in the memory, and highlights the out-of-tolerance points.

As-found and As-left functions allow recording and documenting results for quality control. Download tasks and upload the results.

Snapshots allow you to capture and save data.

ISO 17025 accredited calibration with data

- Built-in temperature readout
  CVD coefficients of a calibrated PRT can be input into the calibrator for accurate temperature measurement.
- Multi lingual interface
  English, German, French, Italian, Spanish,
  Portuguese, Simplified Chinese
  (Traditional Chinese, Japanese and Russian are available per request)
- Build-in unit conversion tool Build-in converters for pressure units, temperature units, temperature vs. resistance (RTDs), and temperature vs millivolt (thermocouples)
- Warranty: 3 years

#### Pressure Specification(222A & 223A)

The 160A series Intelligent Digital Pressure Modules are available for gauge, vacuum and absolute pressure from -15 psi to 10,000 psi (-1 bar to 700 bar). Accuracy from 0.02% FS includes operation over 14°F to 122°F (-10°C to 50°C), one year stability and calibration uncertainty. For detail specification refer to pressure modules datasheet.

## Metrology Made Simple

 HART Communication capability (223A) Support HART<sup>®</sup> instrumentation

## Display

- 3.5 inch TFT color screen
- Misuse protection

Up to 30V voltage on any two sockets and up to 1A current on current sockets will not damage the calibrator. The calibrator will return to normal condition as soon as the voltage or current is removed.

Rechargeable battery

Rechargeable Li-ion battery for 15 hours uninterrupted use.

Battery life will be reduced when 24 V is applied. The rechargeable battery is replaceable.

\* Additel/Land software can be downloaded for free at www.additel.com

Optional Accessories				
Model number	Description			
ADT160A (only for 222A & 223A)	Intelligent Digital Pressure Modules, see page 27			
9060 (only for 222A & 223A)	Pressure module connection cable			
9050	USB to RS232 (DB-9 Male) Adapter			
9050-EXT	RS 232 (DB9/M) extension cable, 9 feet			
9080	Cable kit (including TC plug, compensation cable, S,R,B,K,J,T,E,N)			
9712	Spare chargeable Li-ion battery for multifunction calibrator			
9816	110 V/220 V external power adapter for ADT22X and ADT672 calibrator			
9906	Carrying case for multifunction calibrator			
9510	Additel/Cal Task management software for multifunction calibrator			

# Software

# ACal

Additel ACal is a powerful software package designed to automate or semi-automate pressure calibrations and manage your laboratory. ACal combines the pressure automation features with lab and asset management functions to help make your job easier and more productive. ACal comes in three versions: Basic, Professional, and Network.

ACal Basic supports asset management and task management features. ACal Professional is a single PC installation which combines all the features of Basic with automation functionality. And ACal Network puts the Professional version on a multi-user network platform.

## **MAIN FEATURES**

- Supports multi-users and network environments
- Calibration and asset management
- Simple user interface
- Scanning and printing of QR codes
- User definable permissions and access levels
- Preset test configurations
- Can calibrate variety pressure instruments
- Can calibrate several instruments at a time
- Calibration planning and scheduling
- Certificate management and creation
- Certificate customization

#### 9502 Additel/Log II & Additel/Log II Wireless

Additel/Log II is a real time data logging and graphical software for the ADT681/672/680/760/76 1A/780/875/878/286 models. Additel LogII software also supports wireless data logging when used with Additel products supporting wireless connectivity. Data can be recorded in real-time and recorded results can be uploaded. After results are stored, the data can be exported to a customizable report showing pressure and ambient temperature. Each real-time test can be tagged with a unique record name.

The software also allows you to acquire data to your PC. You can choose to display the data in real-time or historically, as well as in a graph or table format.

#### 9500 Additel/Land & Additel/Land Wireless

With Additel/Land software, you may download test results stored in the internal memory of Additel calibrators to a PC, and export the results to an excel file. It is a free software package and can be downloaded at www.additel.com.
