

## Compact infrared thermometer with optional dual outputs

IRtec Rayomatic TC is a range of high quality, low cost, compact sensors which measure the temperature of inaccessible or moving objects and materials.

They measure temperatures from  $-20^{\circ}\text{C}$  to  $500^{\circ}\text{C}$ , accurately and consistently, with an outstanding response time of 240 ms.

Two-wire models transmit the target temperature as a 4-20 mA output and offer a simple solution for most non-contact temperature measurement applications.

Four-wire models transmit the target temperature as a 0-50 mV or thermocouple output (type J, K or T) plus the internal sensor temperature as a 4-20 mA output. This 2nd output can be used to ensure that the sensor is being operated within the correct ambient temperature limits and prevent damage caused by overheating or overcooling.

The new output option n°5 has an extremely low 3.2 mA current consumption, so it is ideal for maximum battery life in battery-powered applications.
